GOVERNMENT COLLEGE OF TECHNOLOGY, COIMBATORE – 641 013
B.E. CIVIL ENGINEERING – WORKING PROFESSIONALS
2025 REGULATIONS - CURRICULUM
(Working professionals admitted during 2025-2026 and onwards)

FIRST SEMESTER

Sl. No.	Subject Code	Course Title	CA Marks	End Sem. Marks	Total Marks	Hours/week			
						L	T	P	C
THEORY									
1	25WPC1Z1	Applied Mathematics - 1	40	60	100	3	0	0	3
2	25WPC1Z2	Environmental Science and Engineering	40	60	100	3	0	0	3
3	25WPC103	Engineering Mechanics	40	60	100	3	0	0	3
4	25WP C104	Fluids Mechanics and Machinery	40	60	100	3	0	0	3
PRACTICAL									
5	25WP C105	Fluid Mechanics and Machinery Laboratory	60	40	100	0	0	3	1.5
TOTAL			220	280	500	12	0	3	13.5

SECOND SEMESTER

Sl. No.	Subject Code	Course Title	CA Marks	End Sem. Marks	Total Marks	Hours/week			
						L	T	P	C
THEORY									
1	25WPC201	Construction Materials	40	60	100	3	0	0	3
2	25WPC202	Plane and Geodetic Surveying	40	60	100	3	0	0	3
3	25WPC203	Strength of Materials	40	60	100	3	0	0	3
4	25WPC204	Engineering Geology	40	60	100	3	0	0	3
PRACTICAL									
5	25WPC205	Materials Testing Laboratory	60	40	100	0	0	3	1.5
TOTAL			220	280	500	12	0	3	13.5

THIRD SEMESTER

Sl. No.	Subject Code	Course Title	CA Marks	End Sem Marks	Total Marks	Hours/week			
						L	T	P	C
THEORY									
1	25WPC301	Construction Technology	40	60	100	3	0	0	3
2	25WPC302	Water Supply Engineering	40	60	100	3	0	0	3
3	25WPC303	Basic Structural Design - I (Steel)	40	60	100	3	0	0	3
4	25WPC304	Geotechnical Engineering - I	40	60	100	3	0	0	3
PRACTICAL									
5	25WPC305	Soil Mechanics Laboratory	60	40	100	0	0	3	1.5
TOTAL			220	280	500	12	0	3	13.5

FOURTH SEMESTER

Sl. No.	Subject Code	Course Title	CA Marks	End Sem. Marks	Total Marks	Hours/week			
						L	T	P	C
THEORY									
1	25WPC401	Theory of Structures - I	40	60	100	3	0	0	3
2	25WPC402	Construction Engineering and Management	40	60	100	3	0	0	3
3	25WPC403	Basic Structural Design - II (Concrete)	40	60	100	3	0	0	3
4	25WPC404	Waste Water Engineering	40	60	100	3	0	0	3
5	25WPC405	Geotechnical Engineering - II	40	60	100	3	0	0	3
TOTAL			200	300	500	15	0	0	15

FIFTH SEMESTER

Sl. No.	Subject Code	Course Title	CA Marks	End Sem. Marks	Total Marks	Hours/week			
						L	T	P	C
THEORY									
1	25WPC501	Theory of Structures - II	40	60	100	3	0	0	3
2	25WPC502	Highway and Railway Engineering	40	60	100	3	0	0	3
3	25WPC503	Concrete Structures	40	60	100	3	0	0	3
4	25WPC504	Estimation and Quantity surveying	40	60	100	3	0	0	3
5	E1	Elective I	40	60	100	3	0	0	3
TOTAL			200	300	500	15	0	0	15

SIXTH SEMESTER

Sl. No.	Subject Code	Course Title	CA Marks	End Sem. Marks	Total Marks	Hours/week			
						L	T	P	C
THEORY									
1	25WPC601	Water Resources Engineering	40	60	100	3	0	0	3
2	25WPC602	Design and Detailing of Irrigation and Environmental Engineering Structures	40	60	100	3	0	0	3
3	25WPC603	Prestressed Concrete Structures	40	60	100	3	0	0	3
4	E2	Elective II	40	60	100	3	0	0	3
PRACTICAL									
5	25WPC604	Analysis and Design Laboratory	60	40	100	0	0	3	1.5
TOTAL			220	280	500	12	0	3	13.5

SEVENTH SEMESTER

Sl. No.	Subject Code	Course Title	CA Marks	End Sem. Marks	Total Marks	Hours/week			
						L	T	P	C
THEORY									
1	25WPC701	Precast Concrete structures	40	60	100	3	0	0	3
2	E3	Elective III	40	60	100	3	0	0	3
3	E4	Elective IV	40	60	100	3	0	0	3
PRACTICAL									
4	25WPC702	Project Work	60	40	100	0	0	16	8
TOTAL			180	220	400				

Total Credits : 98

LIST OF ELECTIVE SUBJECTS

FIFTH SEMESTER

ELECTIVE 1

Sl. No.	Subject Code	Course Title	CA Marks	End Sem. Marks	Total Marks	Hours/week			
						L	T	P	C
1	25WPC5E1	Industrial Wastewater Management	40	60	100	3	0	0	3
2	25WPC5E2	Concrete Technology	40	60	100	3	0	0	3
3	25WPC5E3	Traffic Engineering and management	40	60	100	3	0	0	3
4	25WPC5E4	Hydrology	40	60	100	3	0	0	3
5	25WPC5E5	Safety In Civil Engineering Practices	40	60	100	3	0	0	3

SIXTH SEMESTER

ELECTIVE II

Sl. No.	Subject Code	Course Title	CA Marks	End Sem. Marks	Total Marks	Hours/week			
						L	T	P	C
1	25WPC6E1	Fundamentals of Remote Sensing and GIS Applications	40	60	100	3	0	0	3
2	25WPC6E2	Energy Conservation Techniques in Construction	40	60	100	3	0	0	3
3	25WPC6E3	Maintenance And Rehabilitation of Structures	40	60	100	3	0	0	3
4	25WPC6E4	Air pollution Management	40	60	100	3	0	0	3
5	25WPC6E5	Pavement Engineering	40	60	100	3	0	0	3

SEVENTH SEMESTER

ELECTIVE III

Sl. No.	Subject Code	Course Title	CA Marks	End Sem. Marks	Total Marks	Hours/week			
						L	T	P	C
1	25WPC7E1	Advanced Concrete Design	40	60	100	3	0	0	3
2	25WPC7E2	Professional Practices, Ethics and Building Bye-Laws	40	60	100	3	0	0	3
3	25WPC7E3	Airport, Docks and Harbour Engineering	40	60	100	3	0	0	3
4	25WPC7E4	IOT Platform for smart city planning	40	60	100	3	0	0	3
5	25WPC7E5	Town Planning and Architecture	40	60	100	3	0	0	3

SEVENTH SEMESTER

ELECTIVE IV

Sl. No.	Subject Code	Course Title	CA Marks	End Sem. Marks	Total Marks	Hours/week			
						L	T	P	C
1	25WPC7E6	Basics of Dynamics and Aseismic design of Structures	40	60	100	3	0	0	3
2	25WPC7E7	Ground Improvement Techniques	40	60	100	3	0	0	3
3	25WPC7E8	Housing Planning and Management	40	60	100	3	0	0	3
4	25WPC7E9	Bridge Engineering	40	60	100	3	0	0	3
5	25WPC7E10	Environmental Management	40	60	100	3	0	0	3

25WPC1Z1	APPLIED MATHEMATICS I (Common to MECH, EEE & ECE Branches)	SEMESTER I
-----------------	--	-------------------

PREREQUISITES		L	T	P	C
NIL		3	0	0	3
Course Objectives	This course mainly deals with topics such as linear algebra, single variable calculus and numerical methods and plays an important role in the understanding of engineering science.				
UNIT – I	LINEAR ALGEBRA	9 Periods			
Consistency of System of Linear Equations, Eigenvalues and eigenvectors, Diagonalization of matrices by orthogonal transformation, Cayley-Hamilton Theorem, Quadratic form to canonical forms.					
UNIT – II	DIFFERENTIAL CALCULUS	9 Periods			
Radius of curvature, Centre of curvature, Circle of curvature , Evolutes of a curve, Envelopes					
UNIT – III	INTEGRAL CALCULUS	9 Periods			
Evaluation of definite and improper integrals, Applications: surface area and volume of revolution (Cartesian coordinates only).					
UNIT – IV	NUMERICAL SOLUTION OF EQUATIONS	9 Periods			
Algebraic and Transcendental equation: Fixed point iteration method, Bisection method, Newton-Raphson method, Simultaneous equation: Gauss elimination method, Gauss-Jordan method, Gauss Seidal method.					
UNIT – V	NUMERICAL INTERPOLATION	9 Periods			
Equal interval: Newton’s forward and Backward difference interpolation formulae, Gauss forward and Backward difference interpolation formulae, Unequal interval: Lagrange’s interpolation, Newton’s divided difference interpolation.					
Contact Periods:					
Lecture: 45 Periods Tutorial: 0 Periods Practical: 0 Periods Total: 45 Periods

7	Jain R.K. and Iyengar S.R.K., - Advanced Engineering Mathematics , Narosa Publications, 8 th Edition, 2012.

COURSE OUTCOMES:		Bloom's Taxonomy Mapped
Upon completion of the course, the students will be able to:		
CO1	Use the essential tool of matrices and linear algebra in a comprehensive manner.	K3
CO2	Explain the fallouts of circle of curvature, evolute and envelopes that is fundamental to application of analysis to Engineering problems.	K3
CO3	Interpret the integral calculus to notions of definite and to improper integrals. Apart from some other applications they will have a basic understanding of Beta and Gamma functions.	K3
CO4	Demonstrate understanding of common numerical methods and how they are used to obtain approximate solutions to polynomial and transcendental equations.	K3
CO5	Derive numerical methods for various mathematical operations and tasks, such as interpolation, differentiation, integration, the solution of linear and nonlinear equations.	K3

25WPC1Z2	ENVIRONMENTAL SCIENCE AND ENGINEERING (Common to MECH, EEE & ECE Branches)	SEMESTER I
-----------------	--	-------------------

PREREQUISITES	L	T	P	C
NIL	3	0	0	3

Course Objectives	The course is aimed at creating awareness among the students and also inculcates the critical ideas of preserving environment.		
UNIT – I	ENVIRONMENTAL ENERGY RESOURCES	9 Periods	
Food-effects of modern agriculture, fertilizers, pesticides, eutrophication & biomagnifications-Energy resources: renewable resources - Hydro Energy, Solar & Wind. Non-renewable resources – Coal and Petroleum - harnessing methods.			
UNIT – II	ECO SYSTEM AND BIODIVERSITY	9 Periods	
Eco system and its components - biotic and abiotic components. Biodiversity: types and values of biodiversity, hot spots of biodiversity, endangered and endemic species, conservation of biodiversity: In situ and ex situ conservation. Threats to biodiversity-destruction of habitat, habitat fragmentation, hunting, over exploitation and man-wildlife conflicts. The IUCN red list categories.			
UNIT – III	ENVIRONMENTAL POLLUTION	9 Periods	
Air pollution, classification of air pollutants – sources, effects and control of gaseous pollutants SO ₂ , NO ₂ , H ₂ S, CO, CO ₂ and particulates. Water pollution - classification of water pollutants, organic and inorganic pollutants, sources, effects and control of water pollution. Noise pollution - decibel scale, sources, effects and control.			
UNIT – IV	ENVIRONMENTAL THREATS	9 Periods	
Global warming-measure to check global warming - impacts of enhanced Greenhouse effect, Acid rain- effects and control of acid rain, ozone layer depletion- effects of ozone depletion, disaster management - flood, drought, earthquake and tsunامي.			
UNIT – V	SOCIAL ISSUES AND ENVIRONMENT	9 Periods	
Water conservation, rain water harvesting, e-waste management, Pollution Control Act, Wild life Protection Act. Population growth- exponential and logistic growth, variation in population among nations, population policy. Women and Child welfare programs. Role of information technology in human and health, COVID-19 - effects and preventive measures.

4	Gilbert M. Masters, “ <i>Introduction to Environmental Engineering and Science</i> ”, 3 rd Edition, Pearson Education, 2015.

COURSE OUTCOMES:		Bloom's Taxonomy Mapped
Upon completion of the course, the students will be able to:		
CO1	Recognize and understand about the various environmental energy resources and the effective utility of modern agriculture.	K2
CO2	Acquire knowledge about the interaction of biosphere with environment and conservation methods of bio diversity.	K2
CO3	Be aware of the sources of various types of pollution, their ill effects and preventive methods.	K2
CO4	Identify and take the preventive measures to control the environmental threats and effects of Global warming, Ozone depletion, Acid rain, and natural disasters.	K2
CO5	Demonstrate an idea to save water and other issues like COVID -19.	K2

25WPC103	ENGINEERING MECHANICS	SEMESTER I
----------	-----------------------	------------

PREREQUISITES :	L	T	P	C
NIL	3	0	0	3

Course Objectives	To expose the students to use the basic principles of mechanics in engineering applications.		
UNIT – I	BASIC CONCEPTS OF FORCES	9 Periods	
Basic Concepts and Principles of Forces– Laws of Mechanics – System of forces in Plane – Free body Diagrams- resultant of a force system – resolution and composition of forces – Lami’s theorem – moment of a force – physical significance of moment-Varignon’s theorem – resolution of a force and couple system– forces in space – addition of concurrent forces in space – equilibrium of a particle in space.			
UNIT – II	STATIC AND DYNAMIC FRICTION	9 Periods	
Frictional resistance – classification of friction- laws of friction – coefficient of friction-angle of friction – angle of repose — cone of friction –advantages-equilibrium of a body on a rough inclined plane – ladder friction – rope friction – wedge friction.			
UNIT – III	PROPERTIES OF SECTION	9 Periods	
Centroid and Centre of Gravity for simple & Composite sections– theorems of moment of inertia Determination of moment of inertia of various sections –Product of Inertia – Principal moment of inertia of plane areas.			
UNIT – IV	BASICS OF DYNAMICS - KINEMATICS	9 Periods	
Kinematics and kinetics – displacements, velocity and acceleration - Equations of motion – Rectilinear motion of a particle with uniform velocity, uniform acceleration, varying acceleration– motion under gravity – relative motion – curvilinear motion of particles – projectiles– angle of projection – range – time of flight and maximum height.			
UNIT – V	BASICS OF DYNAMICS - KINETICS	9 Periods	
Newton’s second law of motion – linear momentum – D’Alembert’s principle, Dynamic equilibrium – equation of particles- principle of work and energy – law of conservation of energy – Principle of impulse and momentum – Equations of momentum – Laws of conservation of momentum. Impact – Time of compression, restitution, collision – Co-efficient of restitution – types of impact – collision of elastic bodies by direct central impact and oblique impact – collision of small body with a massive body – Kinetic energy of a particle.			
Contact Periods:			
Lecture: 45 Periods Tutorial: 0 Periods Practical: 0 Periods Total: 45 Periods

4	Dr.N.Kottiswaran“ <i>Engineering Mechanics</i> ”Sri Balaji Publications,2017.

COURSE OUTCOMES:		Bloom's Taxonomy Mapped
Upon completion of the course, the students will be able to:		
CO1	Familiarize the principles and Concepts of Mechanics	K3
CO2	Calculate the friction force acting on a plane under various conditions.	K2
CO3	Determine the centre of gravity and moment of inertia for different sections.	K2
CO4	Predict the Rectilinear and curvilinear motion of particles.	K3
CO5	Evaluate the dynamics of particles using kinetic principles.	K3

25WPC104	FLUID MECHANICS AND MACHINERY	SEMESTER I
----------	-------------------------------	------------

PREREQUISITES		L	T	P	C
NIL		3	0	0	3
Course Objectives	To impart knowledge on properties and behaviour of fluid at static and dynamic conditions and also study the performance of turbines and pumps				
UNIT – I	FUNDAMENTALS OF FLUID STATICS	9 Periods			
Dimensions and Units - Properties of fluids - Density, specific gravity, viscosity, surface tension, capillarity, elasticity, compressibility, vapour Pressure - Fluid statics – Pascal’s Law - Pressure measurement - Piezometer and Manometers – Hydrostatic forces on plane and curved surfaces					
UNIT – II	FLUID KINEMATICS AND DYNAMICS	9 Periods			
Classification of fluid flow – Continuity equation - one dimensional and three dimensional –Velocity potential and stream functions - Energy equation – Euler’s and Bernoulli’s equation – Applications - Venturimeter, Orifice meter and Pitot tube					
UNIT – III	FLOW THROUGH CONDUITS AND BOUNDARY LAYER THEORY	9 Periods			
Laminar flow between parallel plates – laminar flow in pipes - Hagen Poiseuille equation for flow through circular pipes - Turbulent flow in pipes – Darcy - Weisbach formula for flow through circular pipes - Boundary layer - Definition - Boundary layer thickness - Displacement, energy and momentum thickness					
UNIT – IV	IMPACT OF JETS AND PUMPS	9 Periods			
Impulse momentum Principle- impact of Jet – force exerted by a jet on normal, inclined and curved surfaces for stationary and moving vanes- Angular momentum principle- construction of velocity vector diagrams. Pump- Classification of pumps - Centrifugal pump - reciprocating pump – Work done and efficiency					
UNIT – V	HYDRAULIC TURBINES	9 Periods			
Turbines - classification – construction – working principles and design of Pelton wheel and Francis Turbines – wok done and efficiency – specific speed – operating characteristics.					
Contact Periods:					
Lecture: 45 Periods		Tutorial: 0 Periods		Practical: 0 Periods	
Total: 45 Periods

---	--

COURSE OUTCOMES:		Bloom's Taxonomy Mapped
Upon completion of the course, the students will be able to:		
CO1	Identify the properties of fluids and fluid statics.	K2
CO2	Apply the continuity equation, Euler's equation and Bernoulli's equation for solving fluid flow problems.	K3
CO3	Examine the fluid flow behaviour for laminar and turbulent flows and also determine boundary layer thickness	K3
CO4	Apply the momentum principle for the determination of hydrodynamic forces	K3
CO5	Acquire knowledge in selection and design of turbines based on head and discharge requirements.	K3

25WPC105	FLUID MECHANICS AND MACHINERY LABORATORY	SEMESTER I
----------	---	------------

PREREQUISITES	L	T	P	C
NIL	0	0	3	1.5

Course Objectives	To impart knowledge in solving problems occurring in a pipes due to losses, the verification of bernoulli's theorem and its applications and conducting performance tests on different types of pumps and turbines.
LIST OF EXPERIMENTS: 1. Determination of Darcy's friction factor 2. Verification of Bernoulli's Theorem 3. Determination of coefficient of discharge of Venturimeter / Orifice meter 4. Flow over Notches 5. Flow through Mouthpiece 6. Performance Study of Centrifugal pump 7. Performance Study of reciprocating pump 8. Load test on Pelton wheel 9. Load test on Francis turbine	

Contact Periods:

Lecture: 0 Periods Tutorial: 0 Periods Practical: 45 Periods Total: 45 Periods

COURSE OUTCOMES:		Bloom's Taxonomy Mapped
Upon completion of the course, the students will be able to:		
CO1	Solve different problems in pipes due to losses.	K3
CO2	Verify the Bernoulli's theorem and its applications.	K3
CO3	Can carry out flow measurement through notches	K3
CO4	Do performance tests on different types of pumps.	K3
CO5	Do performance tests on different types of turbines.	K3

25WPC201	CONSTRUCTION MATERIALS		SEMESTER II			
PREREQUISITES			L	T	P	C
NIL			3	0	0	3
Course Objectives	To learn the testing procedures and applications of materials used for building construction.					
UNIT – I	CONVENTIONAL MATERIALS AND PROPERTIES				9 Periods	
History of building materials-Conventional building materials-Aggregates-Natural aggregates-Artificial Aggregates-Water- Requirements of water used in construction works-Steel-New and advanced materials -Eco friendly and green construction materials- Energy efficient and sustainable building materials.						
UNIT – II	CEMENTITIOUS MATERIALSAND MORTAR				9 Periods	
Cement - Types and Grades-Water cement ratio-Hydration of cement- Setting of cement-Bogue’s Compounds- Tests on Cement. Supplementary cementitious materials-Pozzolanic materials-Fly ash-Types-Ground Granulated blast furnace slag- Silicafume- Natural Pozzolans. Cement Mortar properties–Tests on Cement Mortar.						
UNIT – III	PROTECTIVE MATERIALS AND COATINGS				9 Periods	
Damp proof–Water proof-Termite proof –Pest control in buildings-Heat insulating materials-Sound insulating materials. Paints-Characteristics of ideal paint-Types of paints-Distemper-Varnishes.						
UNIT – IV	FLOOR FINISH AND ROOFING MATERIALS				9 Periods	
Floor Finish Materials – Wood- stone (marble, granite, slate) –porcelain tiles- Ceramic Tiles- Glazed tiles-Thermal care tiles-properties- selection criteria. Types of roofing materials- fibre reinforced sheets-Insulated roofing sheets-False ceiling-Materials used for false ceiling.						
UNIT – V	METALLIC, PLASTIC AND COMPOSITE MATERIALS				9 Periods	
Aluminum Products–Properties and Applications. Plastics –Characteristics –PVC –UPVC- Doors and windows, Water tanks-CPVC-PVC materials used in water supply, sanitary and electricity plumbing- Standards as per BIS. Elevation and façade materials- Types of materials used—Insulated glass, Aluminum composite panels, Fibre cement, Wood Plastic composites, cladding- types.						
Contact Periods:						
Lecture:45Periods		Tutorial: 0 Periods		Practical:0 Periods		Total: 45 Periods

4	<i>Shetty,M.S&Jain,A.K, “Concrete Technology: Theory and Practice”, S.Chand and Company Ltd, New Delhi, 2019.</i>

COURSE OUTCOMES: Upon completion of the course, the students will be able to:		Bloom's Taxonomy Mapped
CO1	Examine and compare the properties of most common and advanced building materials.	K2
CO2	Identify the appropriate quality of cementitious materials and properties of mortar.	K2
CO3	Gain Knowledge in protective materials.	K1
CO4	Select the suitable flooring Wand roofing materials.	K2
CO5	Recognize the characteristics and applications of plastic and composite materials.	K3

25WPC202	PLANE AND GEODETIC SURVEYING		SEMESTER II			
PREREQUISITES			L	T	P	C
NIL			3	0	0	3
Course Objectives	To understand the basic principle and concepts of different surveying methods to calculate various measurements using survey instruments.					
UNIT – I	INTRODUCTION, LEVELLING AND CONTOURING				9 Periods	
Definition- Principles - Classification – Field and Office work – Scales – Conventional Signs. Basic Terms - Types of Level – Fundamental Axes - Levelling staff – Bench Marks – Temporary and Permanent Adjustments – Types of Levelling - Curvature and Refraction correction –Reciprocal Levelling–Calculation of Areas and Volumes. Contouring– Characteristics and Uses of Contours – Methods of contouring.						
UNIT – II	THEODOLITE SURVEYING				9 Periods	
Theodolite–types–Terms–Temporary and Permanent Adjustments–Measurement of Horizontal Angles by Repetition and Reiteration – Closing Error and Distribution – Omitted measurements.						
UNIT – III	CURVES AND HYDROGRAPHIC SURVEYING				9 Periods	
Simple curves – Elements–Setting out of curves–Linear and angular methods. Shore line survey–Sounding–Equipment– Methods of Locating.						
UNIT – IV	TRIANGULATION				9 Periods	
Triangulation–classification –Routine- Intervisibility -Signals and Towers. Trigonometrical Levelling - Geodetical observations–Curvature correction- Refraction correction – Axis signal correction–Difference in elevation.						
UNIT – V	MODERN SURVEYING INSTRUMENTS				9 Periods	
Total Station–Principle–classification–working. Drone Surveying – Introduction - Applications. GPS– Developments –Basic Concepts–Segments –Applications. DGPS – Introduction.						
Contact Periods:						
Lecture: 45 Periods Tutorial: 0 Periods Practical: 0 Periods Total: 45 Periods

4	<i>Charles D Ghilani, Paul R Wolf., “Elementary Surveying”, Prentice Hall,2012.</i>
5	<i>Chandra A.M., “Plane Surveying”, New Age International Pvt. Ltd, 2015.</i>

COURSE OUTCOMES: On completion of the course, the students will be able to:		Bloom's Taxonomy Mapped
CO1	Apply different survey method, Interpret level data using different types of levelling techniques and plot contour map by various contouring methods.	K3
CO2	Determine the horizontal distances, vertical distances and area by using theodolite.	K3
CO3	Set out the curves using survey instruments and apply the principles of hydrographic surveying.	K3
CO4	Execute triangulation method, Trigonometric levelling to find horizontal distance, difference in elevation and area.	K3
CO5	Apply modern surveying principles and techniques in civil engineering applications.	K3

25WPC203	STRENGTH OF MATERIALS		SEMESTER II			
PREREQUISITES			L	T	P	C
ENGINEERING MECHANICS			3	0	0	3
Course Objectives	- To learn the basics of shear and bending stresses and evaluate complex stress problems. - To understand the behavior of beams in bending and twisting. - To impart knowledge on different methods of finding deflection of beam. - To get the concepts on analysis of stresses in cylinders and columns.					
UNIT – I	SIMPLE AND COMPLEX STRESSES		9 Periods			
Simple Stresses: Axial Members - Deformation, strain, simple stress, Elastic constants - Compound Bars – Thermal Stresses Complex Stresses: Two mutually Perpendicular direct stresses – Principal Planes and Principal Stresses – Two-Dimensional Stress System – Mohr’s circle						
UNIT – II	BEAMS		9 Periods			
Beams under bending: Beams and Bending – supports and loads - Shear Force and Bending Moment Diagrams for determinate beams – Relationship between rate of Loading, Shear Force and Bending Moment – Point of Contra Flexure. Bending and shear stresses: Bending Stress – Combined Direct and Bending Stresses - Shearing stress.						
UNIT – III	DEFLECTION OF BEAMS		9 Periods			
Deflection of beams: Deflection Curve – Differential Equation – Double Integration Method – Macaulay’s Method – Conjugate Beam Method.						
UNIT – IV	TORSION AND CYLINDERS		9 Periods			
Torsion: Torsion of Circular and Hollow Shafts –Elastic Theory of Torsion - Stresses and Deformation in Circular Solid and Hollow Shafts – Stepped Composite Shafts – Combined Bending Moment and Torsion on Shafts –Power Transmitted to a Shaft – Shafts in Series and Parallel. Thin Cylinders: Hoop and Longitudinal stresses – Volumetric Strain.						
UNIT – V	COLUMNS AND THEORIES OF ELASTIC FAILURE		9 Periods			
Columns: Theory of Columns. - eccentric load – Slenderness Ratio – End Conditions – Buckling Load for Columns- Euler’s Theory – Assumptions and Limitations – Rankine’s Formula – Combined bending and axial load. Theories of Elastic Failure: Failure theories – Factor of Safety – Graphical Representation of Theories for Two Dimensional Stress System.						
Contact Periods: Lecture: 45 Periods Tutorial: 0 Periods Practical: 0 Periods Total: 45 Periods

COURSE OUTCOMES: On completion of the course, the students will be able to:		Bloom’s Taxonomy Mapped
CO1	Describe the fundamental concepts of stress, strain and principal stresses.	K2
CO2	Plot shear force and bending moment diagrams and determine bending stress distribution in beams.	K3
CO3	Determine the deflection of beams.	K3
CO4	Analyze the shaft subjected to twisting.	K3
CO5	Identify the stresses in cylinders, behavior of columns and theory of elastic failures.	K3

25WPC204		ENGINEERING GEOLOGY		SEMESTER II			
PREREQUISITES				L	T	P	C
NIL				3	0	0	3
Course Objectives	To understand the importance of geological knowledge such as earth, minerals, rocks and apply Geological Knowledge in projects such as dams, tunnels, bridge constructions.						
UNIT – I	GENERAL GEOLOGY					9 Periods	
Interrelationship between Geology and civil engineering – Branches of Geology – Earth Structure and composition –Geological processes – Weathering – work of rivers, sea, wind and their Engineering significance- Earthquakes –Earthquake Zones in India - Volcanoes – Ground water – Origin, Occurrence, Properties of rock – Geological work of ground water – Importance in Civil Engineering.							
UNIT – II	MINERALOGY					9 Periods	
Elementary knowledge on symmetry elements of important Crystallographic systems – Physical properties of minerals – Study of the following rock forming minerals – Quartz family, Felspar family, Augite, Hornblende, Biotite, Muscovite, Calcite, Garnet. Ore minerals - Haematite, Magnetite, Bauxite, Graphite, Magnesite – Clay minerals – Properties and Engineering significance.							
UNIT – III	PETROLOGY					9 Periods	
Formation and Classification of rocks and their distinctive properties – Description, Occurrence, Engineering properties and Distribution of the following rocks – Igneous rocks – Granite, Syenite, Diorite, Gabbro, Pegmatite, Dolerite and Basalt. Sedimentary rocks- Sandstone, Limestone, shale, Conglomerate, and Breccia – Metamorphic rocks – Quartzite, Marble, Slate, phyllite, Gneiss and schist.							
UNIT – IV	STRUCTURAL GEOLOGY					9 Periods	
Attitude of beds Dip and Strike - Uses of Clinometer compass – Outcrops – Geological maps – their uses – Structural features – Folds, Faults, Unconformities and Joints – their significance on engineering constructions.							
UNIT – V	GEOLOGICAL INVESTIGATIONS					9 Periods	
Geophysical investigations – Seismic and electrical resistivity methods – Aerial Photo and satellite imageries-Interpretation of remote sensing data-Exploration for ground water – Geological investigations pertaining to Dam and Reservoir, Tunnels and Road cuttings – Landslides – causes and prevention – Sea erosion and coastal protection							
Contact Periods: Lecture:45 Periods Tutorial: 0 Periods Practical:0 Periods Total: 45 Periods							

TEXT BOOK

4	<i>KVGK Gokhale, “Principles of Engineering Geology”, BS Publications, Hyderabad 2011.</i>

COURSE OUTCOMES: On completion of the course, the students will be able to:		Bloom's Taxonomy Mapped
CO1	Understand the internal structure of earth and its relation to volcanism and the various geological agents.	K2
CO2	Identify the properties and uses of Minerals.	K1
CO3	Understand the formation and Engineering properties of rocks.	K2
CO4	Apply fundamental knowledge in structural geology like fault, fold and Joints	K2
CO5	Knowledge in design and construction of major civil engineering structures.	K2

25WPC205	MATERIALS TESTING LABORATORY	SEMESTER II			
PREREQUISITES		L	T	P	C
NIL		0	0	3	1.5
Course Objectives	To deal with experimental determination and evaluation of mechanical characteristics and behaviour of construction materials and to familiarize experimental procedures and common measurement instruments, equipment and devices.				
LIST OF EXPERIMENTS					
1. Mechanical properties of tor steel rod 2. Tension and compression test on springs. 3. Test on Bricks: Visual observation, Compression test, Water absorption test and Efflorescence test 4. Hardness test on different metals. 5. Deflection test on simply supported beams. 6. Deflection test on cantilever beams. 7. Bending test on rolled steel joist 8. Flexure test on tiles 9. Compression test on Concrete Blocks. 10. Demonstration on behaviour of columns					
Contact Periods:					
Lecture:0 Periods		Tutorial: 0 Periods		Practical:45 Periods Total: 45 Periods	

COURSE OUTCOMES: On completion of the course, the students will be able to:		Bloom's Taxonomy Mapped
CO1	Determine the tensile strength of materials	K3
CO2	Obtain bending properties of structural materials	K3
CO3	Determine the hardness properties of the materials	K3
CO4	Predict the compressive strength of the materials	K3

25WPC301	CONSTRUCTION TECHNOLOGY	SEMESTER III
-----------------	--------------------------------	-------------------------

PREREQUISITES	CATEGORY	L	T	P	C
NIL	PC	3	0	0	3

Course Objective	To learn the technologies and practices used for building construction.		
UNIT – I	MASONRY AND PLASTERING	9 Periods	
Stone masonry – Brick masonry – Composite masonry – Robustness of masonry structures –Types of wall – Arches – Lintels. Plastering – Materials – Methods of plastering –Types of plastering – Defects in plastering – Pointing.			
UNIT – II	FLOORING AND ROOFING	9 Periods	
Floors – Floor finishing materials – Terrazzo flooring – Cement concrete flooring – Damp Proof Course – Causes and effects of dampness – Materials and Methods of damp proofing – Anti-termite treatment. Roofs – Roofing materials –Types – Pitched roof – Flat roof – Flat and Ribbed slab. Stairs and Staircases – Ramps and Escalators.			
UNIT – III	DOORS, WINDOWS AND PAINTING	9 Periods	
Doors and Windows – Types – Fixtures and Fastening – Ventilators. Painting – Classification of paints – Painting on new and old surfaces of steel, timber and masonry wall.			
UNIT – IV	CONSTRUCTION PRACTICES	9 Periods	
Centering and shuttering – Materials and Methods – Formwork – Striping Time – Insulating concrete formwork technique – Scaffolding – Plumbing Services – Erection of steel trusses – Frames – Launching girders.			
UNIT – V	MODERN CONSTRUCTION TECHNIQUES	9 Periods	
Slipform Technology – Mivan Construction Technology – Modular Construction – Hybrid construction – Introduction to Automation in construction – Lean Construction.			
Contact Periods:			
Lecture: 45 Periods		Tutorial: 0 Periods	Practical: 0 Periods
			Total: 45 Periods

TEXT BOOKS

1	Punmia.B.C, Ashok Kumar Jain and Arun Kumar Jain, “Building Construction” , Laxmi Publications Pvt.Ltd., 2016.

4	Sushil Kumar, “Building Construction” , Standard Publications, New Delhi, 2016.

COURSE OUTCOMES:		Bloom’s Taxonomy Mapped
Upon completion of the course, the students will be able to:		
CO1	Outline the different types of masonry and plastering works.	K2
CO2	Select the suitable type of floors, roofs, stairs and dampness preventing methods for practical applications.	K3
CO3	Choose suitable doors, windows and paints for buildings.	K3
CO4	Summarize the different construction practices existing in construction.	K2
CO5	Identify modern construction techniques used for construction field.	K2

25WPC302	WATER SUPPLY ENGINEERING	SEMESTER III
-----------------	---------------------------------	-------------------------

PREREQUISITES	CATEGORY	L	T	P	C
NIL	PC	3	0	0	3

Course Objective	To conversant with sources of water, demand of water, characteristics of water and Conveyance of Water. To expose the students to understand the design of water Treatment processes and distribution of water supply	
UNIT – I	QUANTITY OF WATER AND SOURCES OF WATER	9 Periods
Introduction of Public water supply system – Planning, Objectives, Design period, Population forecasting; Water demand – Sources of water and their characteristics, Surface and Groundwater –Impounding Reservoir – Development and selection of source – Source Water quality.		
UNIT – II	QUALITY OF WATER AND TRANSPORTATION	9 Periods
Quality of water - sampling - Characterization – Significance – analysis of water – water borne diseases – quality standards of water as per IS 10500. Intakes – types – intake tower – Transportationof water – types of conduits – Hydraulics of pipe flow – design – materials of pressure pipes – pipe corrosion – Theories, effect and prevention – Laying, jointing and testing of pipe lines. Pumps – Types of pumps – pumping stations.		
UNIT – III	WATER TREATMENT	9 Periods
Objectives – Unit operations and processes – Principles, functions, and design of water treatment plant units, aerators, flash mixers, Coagulation and flocculation – Clarifloccuator - Plate and tubesettlers - Pulsator clarifier – Rapid and slow sand filters - Disinfection - Residue Management – Construction, Operation and Maintenance of treatment units- Recent advances.		
UNIT – IV	ADVANCED WATER TREATMENT	9 Periods
Water softening - Desalination - R.O. Plant - demineralization – Adsorption - Ion exchange - Membrane Systems - RO Reject Management - Iron and Manganese removal –Fluoridation and Defluoridation - Construction , Operation and Maintenance of treatment units – Recent advances.		
UNIT – V	WATER DISTRIBUTION SYSTEM	9 Periods
Distribution of water - requirements of good distribution system - method of distribution system - layouts of distribution system - Requirements of water distribution – Components – Selection of pipematerial – Service reservoirs – Functions – Network design – Analysis of distribution networks - Computer applications – Appurtenances – Leak detection. Principles of design of water supply in buildings – House service connection – Fixtures and fittings, systems of plumbing and types of plumbing.		
Contact Periods:		
Lecture: 45 Periods Tutorial: 00 Periods Practical: 00 Periods Total:45 Periods		

TEXT BOOKS :

1	Garg. S. K., “ Water Supply Engineering ”, Khanna Publishers, Delhi, 2014.

3	<i>Mackenzie L Davis., “Water and Waste Water Engineering Design Principles and Practice”, McGraw Hillbook education, 2010.</i>
4	<i>NPTEL “Water and Waste Water Engineering” by Dr.P.Bose , IIT Kanpur.</i>

COURSE OUTCOMES:		Bloom’s Taxonomy Mapped
On completion of the course, the students will be able to:		
CO1	Recall the principles of water supply and characteristics of water.	K2
CO2	Examine quality of water and its design conveyance system	K2
CO3	Design various water treatment units.	K3
CO4	Choose advanced water treatments	K2
CO5	Plan and design distribution system of water	K3

25WPC303	BASIC STRUCTURAL DESIGN –I (STEEL)	SEMESTER III
<i>(Use of IS 800: 2007, IS 875 (Part III) : 2015 and Steel Tables may be permitted)</i>		

PREREQUISITES	CATEGORY	L	T	P	C
NIL	PC	3	0	0	3

Course Objectives	To enable students to analyze and design steel structural elements and connections, including tension and compression members, beams, and industrial building components, using Limit State Method.		
UNIT – I	SIMPLE STEEL CONNECTIONS	9 Periods	
Steel standard sections – properties – Introduction to Limit State Design. Bolted connections Types of bolts – permissible stresses for black bolt, HSFG bolts– Design of a bolt in single shear, double shear and bearing. Welded connections Principle of welding – weld symbols – types of welded joints – strength of fillet and butt weld – design of welded connections for lap and butt joint – detailing of weld.			
UNIT – II	ECCENTRIC CONNECTIONS AND TENSION MEMBERS	9 Periods	
Eccentric Connections: Bracket Connection Type I and Type II. Tension Members: design of simple and built up members subjected to tension – effective area of angle and Tee sections connected to Gussets –Tension splice – lug angle.			
UNIT – III	COMPRESSION MEMBERS	9 Periods	
Axially loaded columns – Effective length of compression members –Slenderness ratio – Strength of compression members – Design of columns – Built up columns – Design of lattices and battens – Design of slab base – Gusseted base.			
UNIT – IV	BEAMS	9 Periods	
Introduction to plastic analysis - Section classification – Beams: Lateral stability of beams - Elastic critical moment – Bending strength – Shear strength – Web buckling – Web crippling - Deflection– Design of laterally supported beams– Design of laterally unsupported beams (simply supported beams only).			
UNIT – V	INDUSTRIAL BUILDINGS	9 Periods	
Introduction to industrial building – Components: Roofing, Cladding and Wall materials - Structural components and framing - Types of roof trusses - Wind load estimation as per IS875 (Part 3) - Design of purlins using Channel and Angle sections.			
Contact Periods:			
Lecture: 45 Periods Tutorial: 0 Periods Practical: 0 Periods Total: 45 Periods			

TEXT BOOKS:

5	<i>IS 875- 2015,“ Code of Practice for Design Loads (Other than Earthquake) for Buildings and Structures - Part 3 : Wind Loads”</i>

COURSE OUTCOMES: On completion of the course, the students will be able to:		Bloom’s Taxonomy Mapped
CO1	Explain the behavior and failure modes of bolted and welded connections and estimate their strength under axial loading.	K2
CO2	Analyze and design eccentric connections and tension members using Limit State Method.	K3
CO3	Analyze and design compression members and column bases considering buckling and codal provisions.	K3
CO4	Design laterally supported and unsupported beams considering bending, shear, and lateral stability.	K3
CO5	Estimate wind loads and design components of industrial buildings such as roof trusses and purlins.	K3

25WPC304	GEOTECHNICAL ENGINEERING - I	SEMESTER III
-----------------	-------------------------------------	---------------------

PREREQUISITES	CATEGORY	L	T	P	C
NIL	PC	3	0	0	3

Course Objective	To understand the physical and engineering characteristics of soil, evaluate stresses in soils, learn Compaction and Consolidation of soils and to determine the shear parameters of soil.		
UNIT – I	BASIC PROPERTIES OF SOILS	9 Periods	
Origin and classification of soils-Soil deposits of India- Physical properties of soil – inter-relationship among the properties-Phase relations –Index properties- Soil classification system – Unified Soil classification system and IS Classification system-significance-simple field tests.			
UNIT – II	STRESSES IN SOILS	9 Periods	
Soil water statics - effective and neutral stresses –effect of water table- Capillary phenomenon – stresses in soil from external loads – Boussinesq’s theory– Newmark’s chart - Approximate methods – Pressure bulb – Westergaard’s equation.			
UNIT – III	PERMEABILITY AND SEEPAGE	9 Periods	
One dimensional flow through soil – Permeability – Darcy’s law – Laboratory and field methods – Factors influencing permeability – Flow through stratified soil – Seepage Analysis-Introduction, stream function and potential function-Seepage pressure – Quick sand condition – Two dimensional flow – Laplace equation – Flow net –Methods of construction - Electrical analogy– Properties – Applications – Sheet pile cutoff –flow through dams.			
UNIT – IV	COMPACTION AND CONSOLIDATION	9 Periods	
Compaction – Laboratory tests – Factors affecting compaction – Field compaction methods – Compaction control. Consolidation – types- Laboratory test – Interpretation of consolidation test results-Determination of Cv by curve fitting methods – Terzaghi’s theory of consolidation –Consolidation settlement-Maximum past stress, OCR – Pre-consolidation pressure – pressure void ratio relationship– Time factor – Time rate of consolidation.			
UNIT – V	SHEAR STRENGTH	9 Periods	
Mohr’s circle – Characteristics- Principal stresses- Mohr-Coulomb’s strength criterion – Factors affecting shear strength – Types of shear tests– Direct shear – stress strain relationship- Triaxial compression– Drainage conditions – UCC –Vane shear test.			
Contact Periods:			
Lecture: 45 Periods Tutorial: 00 Periods Practical: 00 Periods Total: 45 Periods			

TEXT BOOKS:

1	<i>GopalRanjan and Rao, A.S.R., “Basic and Applied Soil Mechanics”, New Age International Publishers, Third Edition, New Delhi, 2019.</i>
2	<i>Palanikumar, M., “Soil Mechanics”, PHI Learning Pvt. Ltd., 2013.</i>

REFERENCES:

1	Murthy, V.N.S., <i>“Geotechnical Engineering: Principles and Practices of Soil Mechanics and Foundation Engineering”</i> , CBS Publishers’ 2018.

4	Cudoto, D.P., Kitch W.A., and Yeung M.R., <i>“Geotechnical Engineering: Principles and Practices”</i> , Pearson India Education Services, 2018.

COURSE OUTCOMES: On completion of the course, the students will be able to:		Bloom’s Taxonomy Mapped
CO1	Identify different types of soils, perform laboratory experiments to assess the physical, engineering properties of soil and to classify the soil.	K2
CO2	Plot stress distribution diagrams and compute vertical stress due to various loading conditions.	K2
CO3	Evaluate the permeability and seepage through soils.	K2
CO4	Examine compaction process and interpret consolidation characteristics of soils.	K2
CO5	Determine graphically and analytically the shear stresses in any plane	K2

25WPC305	SOIL MECHANICS LABORAORY	SEMESTER III				
PREREQUISITES		CATEGORY	L	T	P	C
NIL		PC	0	0	3	1.5

Course Objective	To impart practical knowledge on testing of soil for various physical properties and to evaluate the engineering properties of the soil and determine the swell-shrink behaviour of soils.		
LAB EXPERIMENTS			
1. Moisture content determination 2. Specific gravity and relative density test for sand. 3. Sieve analysis for coarse grained soil. 4. Consistency limits. 5. Field density tests (Sand replacement method and core cutter method). 6. Permeability tests (Constant Head method and variable Head method). 7. Direct Shear test. 8. Unconfined compression test for Soil. 9. Vane Shear Test for Cohesive Soil. 10. Proctor Compaction Test (Standard and Modified). 11. Differential free swell tests. 12. Swell Pressure Test.			
Contact Periods:			
Lecture: 0 Periods	Tutorial:0 Periods	Practical:45 Periods	Total:45 Periods

COURSE OUTCOMES:		Bloom's Taxonomy Mapped
On completion of the course, the students will be able to:		
CO1	Gain adequate knowledge on the physical properties and classify soil based on physical properties.	K2
CO2	Familiarize with the engineering properties of soil and classify soil based on the engineering properties of soil.	K2
CO3	Gain thorough knowledge on the swell characteristics of soils.	K3
CO4	Judge the suitability of soil for different types of foundations.	K3

25WPC401	THEORY OF STRUCTURES - I	SEMESTER IV
----------	--------------------------	-------------

PREREQUISITES	CATEGORY	L	T	P	C
• 25WPC103 ENGG MECHANICS • 25WPC203 STRENGTH OF MATERIALS	PC	3	0	0	3

Course Objective	To demonstrate the fundamentals of analyzing various types of structures, cables, and suspension bridges; also, the influence line for beams, trusses, and arches will be explored.		
UNIT – I	STATICALLY INDETERMINATE BEAMS	9 Periods	
Propped Cantilever Beams – Fixed Beams – Continuous Beams – Theorem of Three Moments – Calculation of reactions, Bending Moments and Shear Force – Shear Force and Bending Moment Diagrams (for all Types of Loadings, Couple)			
UNIT – II	ENERGY METHODS	9 Periods	
Static and Kinematic Indeterminacy – Beams, Trusses and Frames –Equilibrium and Kinematic Stability — Energy principles – Strain energy and Complementary Energy – Principle of Virtual Work – Castigliano’s First and Second Theorem –Theorem of least work – Clark Maxwell’s reciprocal theorem – Application to simple problems of statically determinate beams, trusses and frames.			
UNIT – III	ARCHES	9 Periods	
Symmetrical Three hinged arch and Two hinged arch – parabolic and circular arches under concentrated loads and uniformly distributed - Temperature effects – Rib shortening. Introduction to Fixed Arch.			
UNIT – IV	CABLES AND SUSPENSION BRIDGES	9 Periods	
Suspension bridges - Components and their Functions - Types of cable supports – forces on cables - forces on Pylons -Three hinged and Two-hinged stiffening girders.			
UNIT – V	ROLLING LOADS FOR DETERMINATE BEAMS AND ARCHES	9 Periods	
Rolling loads - Single concentrated load– UDL longer than the span – UDL shorter than the span– Two concentrated loads – Series of concentrated loads – Equivalent UDL. Influence lines for all types of loads (Determinate beams only). Influence lines for Symmetrical arches – single rolling load and uniformly distributed load.			
Contact Periods:			
Lecture: 45 Periods Tutorial: 00 Periods Practical: 00 Periods Total: 45 Periods			

TEXT BOOK:

1	Dr.R. Vaidyanathan, Dr.P. Perumal., “ Structural Analysis I ”, Laxmi Publications, 2019.
2	Reddy C.S., “ Basic Structural Analysis ”, Tata McGraw Hill Publishing Co., 2015.

4	Ramamurtham. S, “ Theory of structures ”, Dhanpat Rai & Sons, New Delhi, 2018.

COURSE OUTCOMES: On completion of the course, the students will be able to:		Bloom's Taxonomy Mapped
CO1	Predict the behaviour of indeterminate beams using the Theorem of three moments	K3
CO2	Analyze and predict the behaviour of beams, Trusses, and Frames with various loads by energy principles	K2
CO3	Evaluate the internal forces for various arch forms under varied loads.	K2
CO4	Examine and ensure structural integrity, and performance of suspension bridges and cables for various loads.	K3
CO5	Resolve the determinate beams and arches with rolling loads and construct influence line diagrams.	K3

25WPC402	CONSTRUCTION ENGINEERING AND MANAGEMENT	SEMESTER IV
-----------------	--	------------------------

PREREQUISITES	CATEGORY	L	T	P	C
NIL	PC	3	0	0	3

Course Objective	To plan, schedule, execution of construction projects using the basic concepts of management with the available materials, manpower, equipment and cost by software applications.		
UNIT – I	PROJECT MANAGEMENT CONCEPTS AND PLANNING	9 Periods	
Basics of Construction – Unique features of construction – Principles of Management – Role of project manager – Types, features and phases of construction projects – Stakeholders – Functions of Management – Types of organization – Types of Business Operations – Sole proprietorship, Partnership, Joint ventures – Construction Planning – Pre-tender planning, Pre-construction planning and detailed construction planning – Modern Project Management systems.			
UNIT – II	CONSTRUCTION SCHEDULING	9 Periods	
Work Breakdown Structure – Estimation of activity duration – Construction Scheduling – Scheduling techniques – Bar charts – Network techniques – Critical Path Method – PERT – Line of Balance method – Precedence Network Analysis – Crashing of Cost and Time – Resource Aggregation, Allocation, Smoothing and Levelling.			
UNIT – III	MATERIALS AND EQUIPMENT MANAGEMENT	9 Periods	
Materials Management – Functions – Materials Planning – Procurement – Inventory Control – ABC Analysis, VED analysis, FSN analysis, SDE analysis and HML analysis – Economic Order Quantity. Construction Equipment – Earth-moving, Compacting, Concrete mixing, transporting and placing, Hauling and Hoisting Equipment – Dewatering Equipment – Equipment for Demolition – Applications of robots for repetitive activities.			
UNIT – IV	HUMAN RESOURCE MANAGEMENT	9 Periods	
Importance, Functions and objectives – Manpower policy and planning – Recruitment and selection – Training Performance appraisal – Labour’s Wage Policy and Compensation systems – Company union relationship and Collective bargaining – Safety, Health and Environment on project sites: Accidents, causes, effects and preventive measures – Absenteeism and Labour Turn over – Grievances/Conflicts – Identification and resolution.			
UNIT – V	COST MANAGEMENT AND SOFTWARE APPLICATIONS	9 Periods	
Cost Management – Classification of construction cost – Cost coding – Cost Estimation – Project Budget – Cost control – Common causes of time and cost overruns and corrective measures – Funds: sources, S-Curves, cash flow. Software Applications: Project Management software – Introduction to MS Project and Primavera – Building Information Modelling (BIM), Augmented Reality and Virtual Reality in Project Management.			
Contact Periods:			
Lecture: 45 Periods		Tutorial: 0 Periods	Practical: 0 Periods
		Total: 45 Periods

4	Sharma .S.C., <i>“Construction Engineering and Management”</i> , Khanna Publishers, 2008.

COURSE OUTCOMES: Upon completion of the course, the students will be able to:		Bloom's Taxonomy Mapped
CO1	Plan the construction projects with the available resources using the basic concepts of management.	K2
CO2	Schedule the construction projects using network techniques.	K2
CO3	Utilize the materials, equipment, manpower and cost effectively in construction industry.	K3
CO4	Maintain proper financial accounting systems in construction projects.	K3
CO5	Apply of project management software during execution of project.	K3

25WPC403	BASIC STRUCTURAL DESIGN – II (CONCRETE)	SEMESTER IV
<i>(Use of IS 456: 2000 and SP 16 Design Charts may be permitted)</i>		

PREREQUISITES	CATEGORY	L	T	P	C
25WPC203 – STRENGTH OF MATERIALS	PC	3	0	0	3

Course Objectives	To enable students to analyze and design reinforced concrete structural elements such as beams, slabs, columns, and footings using Limit State Method as per IS 456:2000, considering loads, structural behavior, and detailing requirements.		
UNIT – I	REINFORCED CONCRETE MATERIALS	9 Periods	
Introduction to R.C structures – Review of basic material properties - Concrete and Reinforcing steel - Objectives of structural Design- Stages in RCC structural design process for a building- Types of load on structures and load combinations –Load transfer in framed structures - Design philosophies – Basic design concepts –working stress, ultimate load and limit state methods.			
UNIT – II	LIMIT STATE DESIGN OF BEAMS	9 Periods	
Analysis and Design of singly and doubly reinforced rectangular and flanged sections – Design of beams for bending, shear and torsion – bond and anchorage – deflection.			
UNIT – III	LIMIT STATE DESIGN OF SLABS AND STAIRS	9 Periods	
Behaviour of one way and two way slabs – Design and detailing of one way and two way slabs subjected to uniformly distributed load - Design of lintel and lintel cum sunshade – Stairs – Loads on Stairs – Design of Dog legged staircase.			
UNIT – IV	LIMIT STATE DESIGN OF COLUMNS	9 Periods	
Types of columns – Analysis and Design of rectangular and circular columns for axial load, uniaxial and biaxial bending (Short Columns)– Use of interaction charts.			
UNIT – V	LIMIT STATE DESIGN OF FOOTINGS	9 Periods	
Types of Footings - Design of isolated footing for axially loaded columns - Design of wall footing for axial and eccentric load.			
Contact Periods:			
Lecture: 45 Periods Tutorial: 0 Periods Practical: 0 Periods Total: 45 Periods

8	SP: 34-1987, " <i>Handbook on Concrete Reinforcement and Detailing</i> ".

COURSE OUTCOMES:

On completion of the course, the students will be able to:

		Bloom's Taxonomy Mapped
CO1	Estimate design loads and explain the behavior of reinforced concrete structures using working stress and limit state concepts as per IS 456:2000.	K2
CO2	Analyze and design singly and doubly reinforced beams for bending, shear, and torsion using Limit State Method.	K3
CO3	Design one-way and two-way slabs and staircases and prepare reinforcement detailing as per codal provisions.	K3
CO4	Analyze and design short columns subjected to axial load and uniaxial/biaxial bending using interaction diagrams.	K3
CO5	Design isolated and wall footings considering axial and eccentric loading conditions.	K3

25WPC404	WASTE WATER ENGINEERING	SEMESTER IV
-----------------	--------------------------------	------------------------

PREREQUISITES	CATEGORY	L	T	P	C
25WPC302 WATER SUPPLY ENGINEERING	PC	3	0	0	3

Course Objectives	To study about sewage composition, their characteristics, sewer design and sewage treatment processes along with their disposal methods.		
UNIT – I	QUANTITY AND HOUSE DRAINAGE	9 Periods	
Necessity and objectives of sanitary engineering projects-Definitions-systems of sewerage - quantity of sewage - Fluctuations in flow pattern - Estimation of storm runoff - DWF and WWF- Design flow for separate and combined systems – General layout of house drainage - Principles of house drainage, pipes and traps- one pipe system, two pipe system.			
UNIT – II	SEWER AND SEWER APPURTENANCES	9 Periods	
Hydraulics of sewers - Self cleansing velocities – Design of sewer – principle and procedure full flow / partial flow conditions - sewer sections - materials for sewers - sewer joints – laying of sewerage system – sewer cleaning and maintenance- sewage pumping-types of pumps - underground drainage system.			
UNIT – III	QUALITY OF SEWAGE AND PRIMARY TREATMENT	9 Periods	
Characteristics and composition of sewage - physical and chemical analysis - DO, BOD, COD and their significance - cycles of decomposition - Objectives and basic principles of sewage treatment -primary treatment- screens - Grit chamber - principles of sedimentation - Design of settling tanks.			
UNIT – IV	BIOLOGICAL TREATMENT OF SEWAGE	9 Periods	
Basic principles of biological treatment - Filtration - contact beds - Sand Filters – trickling filters -Description and principles of operation of standards / high-rate filters - diffuser /Mechanical aeration - Conventional, high rate and extended aeration process – recirculation - activated sludge process – oxidation pond– Membrane Bioreactor – UASB, stabilization ponds-aerated lagoons- Septic tanks and effluent disposal system- Recent Advances in Sewage Treatment.			
UNIT – V	SEWAGE DISPOSAL AND SLUDGE MANAGEMENT	9 Periods	
Objectives of sludge treatment-properties and characteristics of sludge-Thickening- bio digester – sludge digestion - drying beds - conditioning and dewatering - sludge disposal - Eutrophication - recycle & reuse of waste effluents -self-purification of streams –oxygen sag curve-land disposal –sewage farming.			
Contact Periods			
Lecture: 45 Periods	Tutorial: 00 Periods	Practical: 00 Periods	Total: 45Periods

TEXT BOOKS:

1	Garg S.K., “ <i>Sewage Disposal and Air Pollution Engineering</i> ”, Khanna Publishers, New Delhi,2021

4	<i>Duggal.K.N., “Elements of public Health Engineering”, S.Chand and Co, 2007.</i>

COURSE OUTCOMES: On completion of the course, the students will be able to:		Bloom's Taxonomy Mapped
CO1	Attain knowledge on sewage production and house drainage.	K2
CO2	Design of sewerage system.	K3
CO3	Analyse the quality of sewage and design of primary treatments of sewage.	K2
CO4	Plan and design the biological treatments of sewage.	K2
CO5	Apply suitable sludge treatment and disposal method.	K2

25WPC405	GEOTECHNICAL ENGINEERING - II	SEMESTER IV
-----------------	--------------------------------------	--------------------

PREREQUISITES	CATEGORY	L	T	P	C
25WPC304 GEOTECHNICAL ENGINEERING - I	PC	3	0	0	3

Course Objective	To acquire knowledge on different soil investigation methods, evaluate bearing capacity and settlement of foundations, understand design principles of shallow foundations, calculate load carrying capacity of piles and to study earth pressure and slope stability analysis.		
UNIT – I	SITE INVESTIGATION AND SELECTION OF FOUNDATION	9 Periods	
Scope and objectives — Methods of exploration — Auguring and boring — Wash boring and rotary drilling —Geophysical methods- Depth and spacing of bore holes - Codal provisions— Soil samples — Representative and undisturbed — Sampling methods — samplers-types— Penetration tests (SPT and CPT) — Data interpretation — Bore log report and Selection of foundation.			
UNIT – II	BEARING CAPACITY	9 Periods	
Location and depth of foundation — Codal provisions — Bearing capacity of shallow foundation on homogeneous deposits — Terzaghi's method and BIS method — Factors affecting bearing capacity — Bearing capacity from in-situ tests - plate load test — Allowable bearing pressure — Determination of Settlement of foundations on granular and clay deposits — Total and differential settlement — Allowable settlement — Codal provision — Methods of minimizing total and differential settlements.			
UNIT – III	SHALLOW FOUNDATION	9 Periods	
Types of Isolated footing- Combined footing- Strip and Strap footings-Mat foundation -types- Contact pressure and settlement distribution —Rigid and Flexible foundation- Proportioning of shallow foundations —Design steps-Compensated foundation — Codal provision.			
UNIT – IV	PILE FOUNDATION	9 Periods	
Types of piles -functions— Factors influencing selection of pile — Carrying capacity of single pile in granular and cohesive soil — Static formula — Dynamic formulae (Engineering news and Hiley's methods) — Capacity from penetration tests—Group capacity-Efficiency of pile groups- Feld's rule-Converse — Labarre formula-Negative skin friction —Settlement of pile groups - Under -reamed piles — Construction and Use.			
UNIT – V	SLOPE STABILITY AND EARTH PRESSURE	9 Periods	
Stability of slopes – Types - failure mechanisms – Analysis of finite and infinite slopes-Types of failure – Slip circle method – Friction circle method –Stability numbers and charts. Plastic equilibrium in soils — Active and passive states — Rankine's theory — Cohesionless and cohesive soil — Coulomb's wedge theory — Condition for critical failure plane — Earth pressure on retaining walls of simple configurations — Culmann's Graphical method — Pressure on the wall due to line load — Stability analysis of retaining walls — Codal provisions.			
Contact Periods:			
Lecture: 45 Periods Tutorial: 00 Periods Practical: 00 Periods Total: 45 Periods

4	Holtz, R.D., Kovacs, W.D and Sheahan, T.C., “An introduction to Geotechnical Engineering” , Second Edition, Pearson Publications, 2010.

COURSE OUTCOMES: On completion of the course, the students will be able to:		Bloom's Taxonomy Mapped
CO1	Identify various methods of soil exploration, field testing and prepare soil investigation report.	K2
CO2	Estimate bearing capacity and settlement of foundations.	K2
CO3	Proportion shallow foundations and draw contact pressure distribution.	K2
CO4	Select piles for different soil conditions and calculate the load carrying capacity.	K3
CO5	Analyse stability of slopes and calculate earth pressure on retaining walls.	K3

25WPC501	THEORY OF STRUCTURES - II	SEMESTER V
----------	---------------------------	---------------

PREREQUISITES	CATEGORY	L	T	P	C
• 25WPC103 ENGG MECHANICS • 25WPC203 STRENGTH OF MATERIALS • 25WPC401 THEORY OF STRUCTURES - I	PC	3	0	0	3

Course Objective	To learn slope deflection method, moment distribution method, matrix methods and plastic analysis in solving indeterminate structures.		
UNIT – I	SLOPE DEFLECTION METHOD	9 Periods	
Analysis of continuous beams - Sinking of Supports - Analysis of single storey and single bay rectangular frames with and without sway.			
UNIT – II	MOMENT DISTRIBUTION METHOD	9 Periods	
Distribution factor - Carry over factor - Analysis of continuous beams – Sinking of Supports - Analysis of single storey and single bay rectangular frames with and without sway.			
UNIT – III	MATRIX FLEXIBILITY METHOD	9 Periods	
Analysis of continuous beams, indeterminate frames and trusses with maximum two degrees of static indeterminacy.			
UNIT – IV	MATRIX STIFFNESS METHOD	9 Periods	
Analysis of continuous beams, indeterminate frames and trusses with maximum three degrees of kinematic indeterminacy.			
UNIT – V	PLASTIC ANALYSIS	9 Periods	
Plastic analysis: Beams in pure bending – Plastic moment of resistance – Plastic modulus – Shape factor – Load factor – Plastic hinge and mechanism – Plastic analysis of indeterminate beams and frames – Upper and lower bound theorems.			
Contact Periods:			
Lecture: 45 Periods Tutorial: 00 Periods Practical: 00 Periods Total: 45 Periods

6	<i>NPTEL notes - https://nptel.ac.in/courses/105105109.</i>

COURSE OUTCOMES:		Bloom's
On completion of the course, the students will be able to:		Taxonomy Mapped
CO1	Analyse beams and frames using slope deflection method.	K2
CO2	Analyse beams and frames using moment distribution method.	K2
CO3	Analyse beams, frames and trusses by flexibility method.	K2
CO4	Analyse beams, frames and trusses by Stiffness method.	K2
CO5	Do plastic analysis in beams and frames.	K2

25WPC502	HIGHWAY AND RAILWAY ENGINEERING	SEMESTER V
----------	---------------------------------	------------

PREREQUISITES	CATEGORY	L	T	P	C
NIL	PC	3	0	0	3

Course Objectives	To provide an overview about the highway and railway engineering with respect to, planning, design, construction and maintenance as per IRC standards, specifications and methods.		
UNIT – I	HIGHWAY DEVELOPMENT, PLANNING AND GEOMETRICS	9 Periods	
Highway development and planning, Classification of Highways, Highway alignment. Highway Geometric Design– Typical cross sections -Cross sectional elements-Sight distance-Horizontal alignments-Vertical alignments.			
UNIT – II	DESIGN, CONSTRUCTION AND MAINTENANCE OF PAVEMENTS	9 Periods	
Pavements – types –Components-functions- Design factors- Design of flexible pavements- Design of rigid pavements- Design of joints-IRC recommendations only. Construction of roads – W.B.M. roads –Bitumen roads –Cement concrete roads. Maintenance of highway.			
UNIT – III	TRAFFIC STUDIES AND CONTROL	9 Periods	
Traffic Characteristics. Traffic studies - traffic volume studies - Speed studies - origin and destination study - traffic flow characteristics - traffic capacity study - parking study - Accidental studies. Traffic operations - traffic regulations - traffic control devices - road markings. Design of road intersections. Design of parking facilities. Highway lightings.			
UNIT – IV	RAILWAY MATERIALS, PLANNING AND DESIGN	9 Periods	
Location surveys and alignment - Conventional and Modern methods. Permanent way - Gauges - Components - Functions and requirements - Coning of Wheels. Geometric design- Gradients-Grade Compensation - Super-Elevation- Transition Curves- Widening of Gauges.			
UNIT – V	RAILWAY TRACK OPERATION AND MAINTENANCE	9 Periods	
Points and Crossings - Turnouts – Types - Working Principle. Signaling, Interlocking and Track Circuiting. Construction and Maintenance – Conventional and Modern methods. Railway Stations and Yards. Modern developments in railways, urban railways–Basic planning for LRT & MRTS – Feasibility Study.			
Contact Periods:			
Lecture: 45 Periods Tutorial: 00 Periods Practical: 00 Periods Total: 45 Periods			

TEXT BOOKS:

1	<i>S.K.Khanna, C.E.G.Justo and Dr.A.Veeraraghavan, “Highway Engineering”, Nemchand and Bros,Tenth Edition,2022.</i>
2	<i>Saxena S.C and Arora S.P., “Railway Engineering”, DhanapatRai Publications,2024.</i>

REFERENCES:

1	Satishchandra & MM Agarwal., “Railway Engineering” , Oxford University Press, Second Edition, 2013.
2	Sharma S.K, “Principles, Practice & Design of Highway Engineering” , S.Chand and Co, 2014.
3	Rangwala S.C & K.S. “Railway Engineering” , Charotar Publications, 2017.
4	K.P.Subramanian, “Transportation Engineering: Highway Railway Airport & Harbour Engineering” , Scitech publications (India) Pvt. Ltd, 2015
COURSE OUTCOMES: On completion of the course, the students will be able to:	
	Bloom’s Taxonomy Mapped
CO1	Illustrate the development, planning and geometric design standards for highways.
CO2	Design, construct and carry out maintenance of flexible and rigid pavements.
CO3	Apply the knowledge of the traffic studies and implement traffic regulation and control measures and intersection design.
CO4	Outline the planning of railways and perform geometric design.
CO5	Summarize the process of operation, maintenance of railway track and modern development in railway.

25WPC503	CONCRETE STRUCTURES	SEMESTER V
<i>(Use of IS 456: 2000, IS 3370, IS 1893: 2016, IS 13920: 2016 and SP 16 Design Charts may be permitted)</i>		

PREREQUISITES	CATEGORY	L	T	P	C
25WPC403 – BASIC STRUCTURAL DESIGN II (CONCRETE)	PC	3	0	0	3

Course Objectives	To enable students to analyze, design, and detail advanced reinforced concrete structural components such as footings, retaining walls, flat slabs, and liquid-retaining structures, and to apply earthquake-resistant design and ductile detailing provisions as per relevant BIS codes.		
UNIT – I	FOOTINGS	9 Periods	
Design of Eccentrically loaded footings for columns – Combined rectangular footings for an axially loaded column - Detailing of Reinforcement – Proportioning of Combined trapezoidal footings - Design of raft foundations (Design principles only).			
UNIT – II	EARTH RETAINING STRUCTURES	9 Periods	
Types of retaining walls – Applications - Structural behaviour of retaining walls - Stability requirements of retaining wall – Design of Cantilever retaining wall – Detailing of reinforcement - Counterfort retaining wall (Design principles only).			
UNIT – III	FLAT SLAB DESIGN	9 Periods	
Introduction to Design Loads other than Earthquake loads - Types of flat slab – Design of flat slab using Direct design method – Introduction to Equivalent frame method.			
UNIT – IV	LIQUID RETAINING STRUCTURES	9 Periods	
Water Tank - Resting on the ground- Underground Tank- Rectangular and Circular tanks as per IS code – Design principles of overhead tanks including staging and foundation.			
UNIT – V	INTRODUCTION TO EARTHQUAKE ENGINEERING	9 Periods	
Earthquake forces – Codal provisions for Earthquake resistant design – Earthquake magnitude and intensity – Basic seismic coefficients and seismic zone factors – Design forces – Design factors – Choice of method for multistoried buildings-Equivalent Static Method. Ductile detailing of frames for seismic forces – General principles.			
Contact Periods:			
Lecture: 45 Periods Tutorial: 0 Periods Practical: 0 Periods Total: 45 Periods			

TEXT BOOKS:

9	<i>BIS 1893-2016- Indian Standard Code of practice for Criteria for Earthquake resistant design of structures.</i>

COURSE OUTCOMES: On completion of the course, the students will be able to:		Bloom’s Taxonomy Mapped
CO1	Classify different types of foundations and design isolated, combined, and raft footings	K3
CO2	Analyze stability and design cantilever and counterfort retaining walls with reinforcement detailing.	K3
CO3	Analyze and design flat slabs using the Direct Design Method as per codal provisions.	K3
CO4	Design rectangular and circular water tanks using Working Stress Method.	K3
CO5	Apply seismic design principles and perform ductile detailing of reinforced concrete members.	K3

25WPC504	ESTIMATION AND QUANTITY SURVEYING	SEMESTER V
-----------------	--	-------------------

PREREQUISITES	CATEGORY	L	T	P	C
NIL	PC	3	0	0	3

Course Objectives	To acquire knowledge to estimate the quantities of item of works in buildings, water supply, sanitary works, road works and to do rate analysis and valuation, prepare tender,contract documents and to write report.		
UNIT – I	FUNDAMENTALS AND ESTIMATION OF BUILDINGS	9 Periods	
Fundamentals of Estimation – Different types of estimates – Methods of Estimation - Estimation of Buildings: Load bearing and framed structures with flat roof and sloped roof– Calculation of quantities of brick work, stone masonry, brick masonry, Plain Cement Concrete, Plastering, white washing, colour washing and painting – Estimation of doors and windows.			
UNIT – II	ESTIMATION OF RCC , STEEL AND OTHER STRUCTURES	9 Periods	
Bar bending schedules – Beam, Slab and Column, Foundation, Staircase and Retaining wall. Estimation of Steel Structures. Estimation of Septic Tank, Soak Pit. Estimations of Roads, Culverts and Embankments.			
UNIT – III	RATE ANALYSIS	9 Periods	
Data – Types of Data – Scheduled of Rates – Lead statement – Analysis of Rates for Lime Mortar, Cement Mortar, Brick Masonry, Cement Concrete, Reinforced Cement Concrete, Steel Structures, Damp Proof Course, Plastering, Painting and Flooring.			
UNIT – IV	SPECIFICATION, TENDERS AND CONTR ACTS	9 Periods	
Specifications – Principles of specifications – Importance – Types of specifications – Specification for Excavation, Cement Concrete, Masonry Work. Tenders – E-Tendering – Contracts – Types of Contracts – Contract document.			
UNIT – V	VALUATION AND REPORT WRITING	9 Periods	
Valuation – Necessity – Market Value – Book Value – Scrap Value – Salvage Value – Annuity – Capitalized Values – Sinking Fund –Depreciation – Escalation – Methods of Valuation – Valuation of a Building – Rent Fixation – Mortgage – Lease. Principles for report preparation – report on estimate of residential building.			
Contact Periods:			
Lecture: 45 Periods Tutorial: 0 Periods Practical: 0 Periods Total: 45 Periods			

TEXT BOOKS:

1	<i>Dutta, B.N., “Estimating and costing in civil Engineering”, CBS Polishers and Distributors Private (Ltd) 2026.</i>
2	<i>Kohli D.D. and Kohli R.C., “A Text Book on Estimating, Costing (Civil)”, S. Chand and Co, New Delhi, 2013.</i>

REFERENCES:

3	Birdie G. S., " <i>Estimating and Costing</i> ", DhanpatRai Books Publishers, 2014.
4	Govt of Tamil Nadu PWD – " <i>Standard Schedule of Rates</i> ", latest.

COURSE OUTCOMES: On completion of the course, the students will be able to:		Bloom's Taxonomy Mapped
CO1	Estimate the quantities of various items of construction work.	K2
CO2	Prepare detailed estimates for different civil engineering structures.	K2
CO3	Calculate the cost of various construction works using rate analysis and standard data.	K3
CO4	Prepare specifications of works, tender and contract documents.	K3
CO5	Assess the value of properties and prepare valuation and technical reports.	K3

25WPC601	WATER RESOURCES ENGINEERING	SEMESTER VI
-----------------	------------------------------------	--------------------

REREQUISITES	CATEGORY	L	T	P	C
25WPC302 WATER SUPPLY ENGINEERING	PC	3	0	0	3

Course Objectives	To provide knowledge on hydrological cycle, water resources and its transportation		
UNIT – I	SURFACE WATER HYDROLOGY	9 Periods	
Hydrological Cycle – Precipitation – forms and types – Average rainfall over a basin – Arithmetic mean, Thiessen polygon and Isohyetal method – missing precipitation – optimum numbers. Abstractions from Precipitation – Runoff process – Estimation of Surface Runoff – Empirical formulae, Infiltration Indices and Unit Hydrograph method.			
UNIT – II	CROP WATER REQUIREMENT AND RESERVOIR PLANNING	9 Periods	
Crop water requirement – capacity of canals – types of reservoirs – Investigation for reservoir planning – Selection of site for a reservoir – Zones of storage in reservoirs –Yield of a reservoir – Safe, secondary and average yield – mass curve and demand curve – Calculation of safe yield from a reservoir of a given capacity – Determination of reservoir capacity for a specified yield.			
UNIT – III	GRAVITY DAM	9 Periods	
Forces acting and their computation – Modes of failures – Elementary profile of a gravity dam –Practical profile – High and Low gravity dams – Stresses acting on dam – Design procedure for a gravity dam – Problems to check stability Analysis.			
UNIT – IV	DISTRIBUTION SYSTEM	9 Periods	
Classification of Canals – canal alignment – Design procedure for an unlined irrigation channel -Kennedy’s theory – Wood table – Lacey’s theory – Comparisons of the two theories – Uses of Garret’s diagram in channel design – Balancing depth of cutting – component parts of a canal cross section – design of lined canals – Problems.			
UNIT – V	GROUND WATER HYDROLOGY	9 Periods	
Occurrence of ground water – types of aquifers – Storage coefficient – coefficient of transmissibility and permeability – types of open and tube wells. Steady radial flow into a well –Yield estimation of unconfined and confined aquifers – Yield from an open well by constant level pumping test and recuperation test – well loss – Site selection for a tube well – Problems.			
Contact Periods:

4	<i>Satya N Murthy, chella, “Water Resources Engineering : Principles and Practice”, New age Publishers, 2020</i>

COURSE OUTCOMES:		Bloom’s Taxonomy Mapped
On completion of the course, the students will be able to:		
CO1	Explain the hydrological cycle, equations and its components	K2
CO2	Fix the reservoir capacity and their yield predictions for a demand	K2
CO3	Check the forces acting and stability analysis of gravity dam.	K2
CO4	Design the section of lined and unlined canals	K3
CO5	Conduct the yield tests in open and tube wells in real fields.	K2

25WPC602	DESIGN AND DETAILING OF IRRIGATION AND ENVIRONMENTAL ENGINEERING STRUCTURES	SEMESTER VI
----------	---	-------------

PREREQUISITES	CATEGORY	L	T	P	C
25WPC302 WATER SUPPLY ENGINEERING 25WPC404 WASTEWATER ENGINEERING	PC	3	0	0	3

Course Objectives	To design and detail the different Irrigation Engineering and Environmental Engineering structures.
PART A :	IRRIGATION ENGINEERING
Tank Surplus Weir (Type A and D) -Tank Sluice with a Tower Head -Direct Sluice - Notch type Canal Drop - Canal Regulators and river regulators- Cross-Drainage Works (Syphon Aqueduct type II &III)	
PART B :	ENVIRONMENTAL ENGINEERING
Intake tower - Screening device - Primary sedimentation tank – Clariflocculator - Slow and Rapid sand filters – Secondary settling tanks-Trickling filter-Activated sludge process-Sludge digestion tank- Septic tank with dispersion trench and soak pit- Infiltration gallery.	
Contact Periods: Lecture: 45 Periods Tutorial:00 Periods Practical: 00 Periods Total:45 Periods	

Question paper pattern Question paper shall consist of two questions from each part. Part A consists of 60 marks and Part B consists of 40 marks and the students have to answer one question from each part.

COURSE OUTCOMES:		Bloom's Taxonomy
On completion of the course, the students will be able to:		Mapped
CO1	Design the different Hydraulic structures in the field.	K3
CO2	Acquire hands on experience in preparation of drawings for Irrigation Structures.	K3
CO3	Design the different Environmental Engineering structures in the field.	K3
CO4	Acquire hands on experience in preparation of drawings for Environmental Structures.	K3
CO5	Recall the importance of the Irrigation and Environmental Structures in real life.	K2

25WPC603	PRESTRESSED CONCRETE STRUCTURES	SEMESTER VI
-----------------	--	--------------------

PREREQUISITES	CATEGORY	L	T	P	C
NIL	PC	3	0	0	3

Course Objectives	To impart knowledge on the analysis and design of prestressed concrete members, including flexural, tension, compression and composite structures, considering prestressing systems, losses, deflection and codal provisions.		
UNIT – I	INTRODUCTION	9 Periods	
Principles – Pretensioning – Posttensioning – Advantages and Types of prestressing – Systems of prestressing –Materials for prestressed concrete – Calculation of fibre stresses for various section (Rectangle, I, T) of simply supported beam – Stress method – Moment of resistance method – Load balancing method.			
UNIT – II	LOSSES AND DEFLECTION	9 Periods	
Various losses in prestressed concrete members – Deflection of prestressed concrete flexural members – calculation of long–term deflection.			
UNIT – III	DESIGN OF FLEXURAL MEMBERS AND END BLOCK		
Pre tensioned and post tensioned simply supported rectangle, I, T sections – Calculation of ultimate flexural strength of section using IS code – Stress method – Design for flexure – Design for shear. End block – Analysis – Anchorage zone stresses– Guyon – Magnel’s method – IS Code method – Design of End zone reinforcement.			
UNIT – IV	DESIGN OF PRESTRESSED AXIAL MEMBERS, SLEEPERS, POLES AND PIPES	9 Periods	
Design of Prestressed tension members subjected to axial load - Design of compression members - Design of sleepers and poles - Analysis and Design of Circular pipes.			
UNIT – V	COMPOSITE CONSTRUCTION	9 Periods	
Types of composite construction - Transformation of composite sections - Flexural analysis of composite simply supported beams - Differential Shrinkage - Limit state design criteria - partial prestressing - non prestressed reinforcements.			
Contact Periods:			
Lecture: 45 Periods Tutorial: 0 Periods Practical: 0 Periods Total: 45 Periods

3	S Ramamrutham, “ Prestressed Concrete Structures ”, Dhanpat Rai Publishing Company, 2003.
3	NPTEL notes – https://nptel.ac.in/courses/105106117 .

COURSE OUTCOMES:		Bloom's
On completion of the course, the students will be able to:		Taxonomy Mapped
CO1	Describe the systems and evaluate the fibre stress, losses and deflection of prestressed elements.	K2
CO2	Evaluate the losses and deflection of prestressed elements.	K3
CO3	Design the prestressed concrete beam and end block.	K3
CO4	Design prestressed concrete tension members, compression members, sleepers, poles and circular pipes.	K3
CO5	Analyse and design of composite prestressed concrete sections.	K3

25WPC604	ANALYSIS AND DESIGN LABORATORY	SEMESTER VI
-----------------	---------------------------------------	--------------------

PREREQUISITES	CATEGORY	L	T	P	C
25WPC401 Theory of Structures - I 25WPC501 Theory of Structures - II 25WPC303 Basic Structural Design – I (Steel) 25WPC403 Basic Structural Design – II (Concrete)	PC	0	0	3	1.5

Course Objective	To familiarize the programming skills for analysis, and design of various 2D and 3D Truss, Frames using the software, detailing as per code.
-------------------------	--

LIST OF EXPERIMENTS	9 Periods
1. Modelling and Analysis of 2D Truss 2. Modelling and Analysis of 3D Truss 3. Analysis and Design of 2D Frame 4. Design of singly reinforced beam 5. Design of doubly reinforced beam 6. Design of one-way slab 7. Design of two-way slab 8. Design of cantilever slab 9. Design of column 10. Design of isolated footing 11. Analysis and Design of RCC (G+1) Residential building. Detailing of beams, slabs, columns, and foundations as per SP34 using AutoCAD.	
Contact Periods: Lecture: 00 Periods Tutorial: 00 Periods Practical: 45 Periods Total: 45 Periods	

COURSE OUTCOMES:		Bloom's Taxonomy Mapped
On completion of the course, the students will be able to:		
CO1	Analyze the structural systems under gravity and lateral loads.	K3
CO2	Perform the design of structural elements using IS code.	K3
CO3	Analysis and design of reinforced concrete structures as per IS Code.	K3
CO4	Analysis and design of steel structures as per IS Code.	K3
CO5	Perform the detailing of structural elements using IS code.	K3

25WPC701	PRECAST CONCRETE STRUCTURES	SEMESTER VII
-----------------	------------------------------------	---------------------

PREREQUISITES	CATEGORY	L	T	P	C
NIL	PC	3	0	0	3

Course Objectives	To impart knowledge on the planning, production, analysis, design, handling and erection of precast concrete structural systems and components.		
UNIT – I	INTRODUCTION	9 Periods	
Precast Construction – Need – Comparison with monolithic construction –Advantages and Disadvantages – Methods – Types of precast systems – Modular coordination – Standardization – Tolerance. Precast concrete – Materials– Grouting.			
UNIT – II	PRECAST COMPONENTS AND SYSTEMS	9 Periods	
Precast elements –Beams–Columns– Roof units– Floor units– wall panels – footings. Structural System – Skeletal frame System – Large Panel System – Block System.			
UNIT – III	PRODUCTION TECHNOLOGY	9 Periods	
Choice and planning of production setup – Manufacturing methods – Production process – Moulds – Acceleration of concrete hardening, Curing.			
UNIT – IV	ANALYSIS, DESIGN AND JOINTS IN STRUCTURAL MEMBERS	9 Periods	
Loads–Load combination, Disuniting of structures– Analysis of precast frames– Design of inverted Tee beam and L beam. Connection in precast building – Column to foundation connections, Wall panel to foundation connections, Beam to Column Connections, Column to column Connections, Floor to Beam Connections, Wall panel to Wall Panel Connection.			
UNIT – V	HANDLING AND ERECTION	9 Periods	
Storage of precast elements - Equipments for hoisting and erection - Installation of precast element - Column, Wall, Beam, Slab - Transportation - Handling Equipments and Handling Devices - Vacuum lifting pads.			
Contact Periods:			
Lecture: 45 Periods Tutorial: 0 Periods Practical: 0 Periods Total: 45 Periods			

TEXT BOOKS:

1	<i>K.M. Elliott, “Precast concrete structures”, Butterworth Heinmann, 2002.</i>
2	<i>Handbook on Precast Concrete Buildings, ICI bulletin.</i>

REFERENCES:

1	<i>Alfred Steinle, Hubert Bachmann, Mathias Tillmann, “Precast Concrete Structures” Wiley, 2019.</i>
2	<i>Ganesan and Latha, “Prefabricated structures”, Sree Kamalamani Publications, Chennai, 2014.</i>
3	<i>PCI Design Handbook (Precast and Prestressed Concrete), 9th Edition, 2025.</i>

COURSE OUTCOMES: On completion of the course, the students will be able to:		Bloom's Taxonomy Mapped
CO1	Apply the principles, materials, systems and methods used in precast concrete construction.	K2
CO2	Identify and classify various precast components and structural systems used in buildings	K2
CO3	Apply production technologies, manufacturing processes and curing methods for precast concrete elements.	K3
CO4	Analyse and design precast structural members and different types of structural connections.	K3
CO5	Demonstrate knowledge on storage, transportation, handling and erection techniques of precast concrete elements.	K3

25WPC702	PROJECT WORK	SEMESTER VII
----------	--------------	-----------------

PREREQUISITES	CATEGORY	L	T	P	C
ALL CIVIL ENGINEERING SUBJECTS	PC	0	0	16	8

Course Objective	To enable the students to apply the theoretical knowledge in practice, improve the design capability and provide an opportunity of in-depth exploration of a particular topic in the Civil Engineering.
COURSE CONTENT: It will be assigned by the Department for maximum of four students in a group, under the guidance of a Supervisor. This course envisages a design problem or experimental work in any one of the disciplines of Civil Engineering. The Project work includes: • Survey and collection of relevant data on the assigned topic • Working out a preliminary Drawings to the Problem relating to the topic • Conducting preliminary & detailed Analysis/ Modelling / Simulation / Design / Feasibility • Preparing a Written Report on the Study conducted • Final Seminar as oral Presentation before a Departmental Committee	
Contact Periods: Lecture: 00 Periods Tutorial: 00 Periods Practical: 90 Periods Total: 90 Periods	

COURSE OUTCOMES: On completion of the course, the students will be able to:		Bloom's Taxonomy Mapped
CO1	Identify Civil Engineering Analytical Problems based on present scenario	K2
CO2	Describe the IS Codes & Develop the general arrangement drawings.	K3
CO3	Do detailed Analysis/Modelling, produce detailed design & drawings.	K3
CO4	Produce a bill of quantities and calculate approximate project cost.	K3
CO5	Prepare the final detailed project report.	K3

25WPC5E1	INDUSTRIAL WASTEWATER MANAGEMENT	SEMESTER V
-----------------	---	-----------------------

PREREQUISITES	CATEGORY	L	T	P	C
25WCP302 WATER SUPPLY ENGINEERING 25WPC404 WASTEWATER ENGINEERING	PE	3	0	0	3

Course Objectives	To understand the qualitative and quantitative assessment of industrial wastewater and the principles of waste minimization technique on environment and the effect of disposal of various industrial wastewater and their treatment technologies.		
UNIT – I	SOURCES OF INDUSTRIAL WASTE	9 Periods	
Industrial waste survey – Sources & effects measurement of Industrial wastewater Flow-generation rates - Sampling and preservation of samples for analysis -Wastewater Characterization-Toxicity of industrial effluents- Prevention vs Control of Industrial Pollution – Source reduction techniques - effect of Industrial Effluents on Streams, Sewer and Human health – Industrial scenario in India – Industrial activity and environment.			
UNIT – II	TREATMENT AND CONTROL TECHNOLOGIES	9 Periods	
Waste minimization - Equalization - Neutralization – Oil separation – Flotation –Precipitation – Heavy metal removal – Adsorption – Aerobic and anaerobic biological treatment – Sequencing batch reactors – High Rate reactors - Chemical oxidation –Ozonation – Photocatalysis – Wet Air Oxidation - Evaporation – Ion Exchange – Membrane Technologies – management of RO reject - Nutrient removal – Implementing and promoting pollution prevention programs in industries.			
UNIT – III	INDUSTRIAL WASTEWATER DISPOSAL	9 Periods	
Individual and Common Effluent Treatment Plants – Advantages – Joint treatment of Industrial and domestic wastewater – Recirculation of Industrial Waste – Disposal of effluent into streams, lakes and oceans and associated problems – Effluent disposal methods – Sludge disposal technique.			
UNIT – IV	INDUSTRIAL PROCESS AND TREATMENT-I	9 Periods	
Industrial manufacturing process and source, wastewater characteristics, effects and treatment methods of liquid waste from Textile industry - Sugar mill– Coal and Gas based power plants – Fertilizer industry – Dairy and food processing industries.			
UNIT – V	INDUSTRIAL PROCESS AND TREATMENT-II	9 Periods	
Industrial manufacturing process and source, wastewater characteristics, effects and treatment methods of liquid waste from Pulp and Paper mill - Iron and Steel industries - Automobile Industry- Pharmaceutical industry- Industrial estates and Industrial Clusters.			
Contact Periods: 45			
Lecture: 45 Periods Tutorial: 00 Periods Practical: 00 Periods Total: 45Periods			

TEXTBOOKS

1	Garg S.K., “ <i>Sewage Disposal and Air Pollution Engineering</i> ”, Khanna Publishers, New Delhi, 2018
2	Patwardhan, A.D., “ <i>Industrial Waste Water Treatment</i> ”, PHI Learning, 2017

REFERENCES

1	Eckenfelder, W.W., “ Industrial Water Pollution Control ”, McGraw-Hill, 2014.
2	Soli. J Arceivala, Shyam. R Asolekar “ Wastewater Treatment for Pollution Control and Reuse ”, McGraw-Hill, 2006.
3	Frank Woodard, “ Industrial waste treatment Handbook ”, Butterworth Heinemann, New Delhi, 2006.

5	Mahajan S. P. “ Pollution Control in process industries ”, Tata McGraw Hill Publishing Co Ltd., New Delhi, 2008.
6	Metcalf and Eddy, “ Waste Water Engineering- Treatment and Reuse ”, Tata Mc-Graw Hill Company, New Delhi 2007

COURSE OUTCOMES: On completion of the course, the students will be able to:		Bloom’s Taxonomy Mapped
CO1	Carry out qualitative and quantitative assessment of industrial wastewater	K2
CO2	Analyze the principles of waste minimization techniques	K2
CO3	Identify and select appropriate disposal methods	K2
CO4	Manage the effluent treatment from major industries	K2
CO5	Examine the manufacturing and treatment processes and the concept of industrial clusters	K2

25WPC5E2	CONCRETE TECHNOLOGY (Use of IS:10262-2019, IS: 456-2000 and ACI 211.1-91 may be permitted)	SEMESTER V
-----------------	--	-------------------

PREREQUISITES	CATEGORY	L	T	P	C
NIL	PE	3	0	0	3

Course Objective	To understand about various materials for concrete production, the properties of fresh and hardened concrete, special concrete and mix design for concrete.		
UNIT – I	INGREDIENTS OF CONCRETE	9 Periods	
Cement – constituents – hydration - Tests on cement - Types of cement - Aggregates properties and uses - Classification of aggregates - Properties and test on aggregates - gradation - Quality of water - Admixtures - Chemical Admixtures and mineral admixtures.			
UNIT – II	CONCRETING OPERATIONS	9 Periods	
Concreting operations: Batching, mixing, transportation, placing, compaction, curing and finishing of concrete. Water Proofing: Importance and need of water proofing - Methods of water proofing - materials used for water proofing - Joints in Construction: Types of joints - joining old and new concrete - Methods of joining - materials used for filling joints.			
UNIT – III	PROPERTIES OF CONCRETE	9 Periods	
Properties of fresh concrete – Workability - Segregation Bleeding - Test for fresh concrete properties - Properties of hardened concrete - Strength - Stress - Strain characteristics - Modulus of Elasticity - Shrinkage - Creep - Thermal properties - Permeability - Test for hardened concrete properties - Introduction to micro structural properties of concrete· Non- Destructive Test.			
UNIT – IV	MIX DESIGN AND QUALITY CONTROL OF CONCRETE	9 Periods	
Quality Control- Frequency of sampling - Statistical analysis of test results - standard deviation - Coefficient of variation - Characteristic strength - Acceptance and rejection Criteria - Importance of water cement ratio - Importance of cover to concrete. Nominal mixes - Design Mixes factors influencing the design mix - Mix Design by IS method and ACI method.			
UNIT – V	SPECIAL CONCRETES AND CONCRETING METHODS	9 Periods	
High Performance Concrete - Lightweight Concrete - Self Compacting Concrete - Polymer concrete - Fibre Reinforced Concrete - 3D printing of concrete. Special Concreting Methods: Pumped Concrete - Ready mix Concrete – Under water Concrete - Hot and Cold weather Concreting - Precast Concrete - Pre-placed Concrete.			
Contact Periods:			
Lecture: 45 Periods		Tutorial: 00 Periods	Practical: 00 Periods
Total: 45 Periods			

TEXT BOOKS:

1	Shetty M.S and Jain A. K, " Concrete Technology - Theory and Practice ", S. Chand & Company, New Delhi, 2026.
2	Santha kumar A.R, " Concrete Technology ",S.Chand Publishers, 2018.

REFERENCES:

1	Gambhir M.L, " Concrete Technology - Theory and Practice ", Tata Mc-Graw Hill Company, 2025.
2	ISI 10262 -20 19, Concrete Mix Proportioning - Guidelines.
3	ACI 211. 1-91, Standard Practice for Selecting Proportions for Normal, heavy weight and Mass Concrete, American Concrete Institute.
4	Neville A .M " Properties of Concrete ", Pearson Education India,,20 12
5	Povindar K. Mehta, Paulo J . M. Monteiro," Concrete: Microstructure, Properties and Materials ", Mc-Graw Hill Company, 2014.

COURSE OUTCOMES: On completion of the course, the students will be able to:		Bloom's Taxonomy Mapped
CO1	Identify the properties and role of ingredients like cement, aggregate, admixtures in concrete.	K2
CO2	Choose the suitable formwork and methods of concrete production for construction.	K3
CO3	Infer the behaviour of fresh and hardened concrete.	K2
CO4	Proportion the concrete using various mix design concepts.	K3
CO5	Select appropriate types of concrete for specific requirements.	K3

25WPC5E3	TRAFFIC ENGINEERING AND MANAGEMENT	SEMESTER V
-----------------	---	-----------------------

PREREQUISITES	CATEGORY	L	T	P	C
NIL	PE	3	0	0	3

Course Objectives	To gain knowledge on the traffic surveys, signals, safety aspects and traffic management projects		
UNIT – I	INTRODUCTION	9 Periods	
Scope– Properties of traffic engineering elements – vehicle, driver and road characteristics - skid resistance and breaking efficiency – simple problems. Components of traffic Engineering – control mechanisms.			
UNIT – II	TRAFFIC SURVEYS	9 Periods	
Surveys – Classification - Volume, Speed and delay, origin and destination - parking, accidents – stastical methods for traffic engineering – simple problems – analysis-capacity of roads-level of service – interpretation of traffic studies and conclusions.			
UNIT – III	TRAFFIC CONTROL	9 Periods	
Traffic signs – location and design recommendations - Road markings – Classification and design of traffic signals –signal co-ordination – Traffic islands and rotaries –Traffic control aids and street furniture – Regulation of traffic –Modern methods of traffic control.			
UNIT – IV	TRAFFIC SAFETY AND MANAGEMENT	9 Periods	
Road accidents – types - causes and prevention with emphasis on engineering factor s –Traffic management, Transport system management (TSM) and Transport Demand Management (TDM), restrictions on turning movements, one way streets, traffic segregation, tidal flow operation, exclusive bus lanes and other management measures – introduction to intelligent transport systems (ITS).			
UNIT – V	TRAFFIC MANAGEMENT PROJECTS	9 Periods	
Design of parking facilities, on street and off street parking – case studies on area traffic management – street lighting –noise and air pollution abatement – Basis of comprehensive traffic and transport studies – intersection improvements including design of roundabouts.			
Contact Periods:			
Lecture: 45 Periods Tutorial: 00 Periods Practical: 00 Periods Total: 45 Periods			

TEXT BOOKS :

1	<i>Kadiyali.L.R, “Traffic Engineering and Transport planning”, Khanna Publishers, 2011.</i>
2	<i>Salter.R.I., and Hounsell.N.B, “Highway Traffic Analysis and Design”, Macmillan Press Ltd., 2000.</i>

REFERENCES :

4	<i>Fred L. Mannering, Scott S. Washburn and Walter P. Kilareski, “Principles of Highway Engineering and Traffic Analysis”, Wiley India Pvt. Ltd., New Delhi, 2011.</i>

COURSE OUTCOMES:		Bloom's Taxonomy Mapped
On completion of the course, the students will be able to:		
CO1	Express the details of traffic elements and their characteristics.	K2
CO2	Conduct various traffic surveys.	K2
CO3	Perform design of traffic signals.	K3
CO4	Analyse the causes and control measures of road accidents.	K3
CO5	Design of parking facilities with improved intersection points.	K2

25WPC5E4	HYDROLOGY	SEMESTER V
-----------------	------------------	-----------------------

PREREQUISITES	CATEGORY	L	T	P	C
NIL	PE	3	0	0	3

Course Objectives	To obtain the knowledge on the spatial and temporal variations of rainfall and their analysis, design of well system and predict the future floods and identify their routing.		
UNIT – I	HYDROMETEOROLOGY	9 Periods	
Hydrological cycle – processes and budget - Hydro meteorological factors – Cloud formation – Winds and their movement –Types of precipitation– Forms of precipitation – Indian monsoon system–Density and Adequacy of rain gauges– Recording and non- recording raingauges–Optimum number of raingauges.			
UNIT – II	PRECIPITATION AND ABSTRACTIONS	9 Periods	
Spatial distribution – Consistency analysis – Frequency analysis – Intensity, duration, frequency relationships – Evaporation– Infiltration – Horton’s equation – Infiltration indices – measurement of infiltration–abstraction loss.			
UNIT – III	STREAM FLOW	9 Periods	
Runoff process –measurement of stream flow– factors affecting stream flow– Stage-discharge relationship– Peak discharge estimation– hydrograph analysis– base flow separation– unit hydrograph for stream flow estimation– synthetic unit hydrograph– hydrological modeling.			
UNIT – IV	GROUND WATER HYDROLOGY	9 Periods	
Occurrence of ground water – Types of aquifer – Dupuit’s assumptions – Darcy’s law – Estimation of aquifer parameters – Pump tests – Steady and unsteady state conditions - Discharge in a Confined and Unconfined Aquifers–Leaky aquifer–well loss–aquifer loss– problems.			
UNIT – V	FLOOD ANALYSIS	9 Periods	
Flood estimation – Gumbel’s method – Log Pearson type III method – Reservoir flood routing –Channel routing – Types of streams – Stage discharge relationships - Flow measurements – Current meter method for velocity measurements.			
Contact Periods:			
Lecture:45 Periods Tutorial: 00 Practical: 00 Periods Total: 45 Periods			

TEXT BOOKS :

1	<i>Santosh Kumar Garg, “Irrigation Engineering and Hydraulics Structures”, Khanna Publishers, New Delhi, 2023.</i>
2	<i>Jayaramy Reddy. P., “Hydrology”, Tata McGraw-Hill Publications Pvt. Ltd, New Delhi, 2016</i>

REFERENCES :

1	<i>Subramanya. K., “Engineering Hydrology”, Tata McGraw-Hill Publications Pvt. Ltd, New Delhi, 2017</i>

3	<i>David K. Todd and Larry W. Mays, “Groundwater Hydrology”, Wiley Publications Pvt. Ltd, New Delhi, 2011</i>
4	<i>Asawa G.L., “Irrigation and Water Resources Engineering”, New Age International Publications, New Delhi, 2006.</i>

COURSE OUTCOMES: On completion of the course, the students will be able to:		Bloom's Taxonomy Mapped
CO1	Summarise the types of rain gauges and estimate optimum number of raingauges.	K2
CO2	Present the meteorological data for forecasting analysis.	K2
CO3	Identify the needs and importance of hydrographs in Run-off studies	K2
CO4	Design the open and tube wells for different aquifers	K2
CO5	Predict the future floods and identify the importance of flood routing	K2

25WPC5E5	SAFETY IN CIVIL ENGINEERING PRACTICES	SEMESTER V
-----------------	--	-----------------------

PREREQUISITES	CATEGORY	L	T	P	C
NIL	PE	3	0	0	3

Course Objectives	To execute various safety measures in construction site during pre-construction, construction stage and to carefully execute the protection measures during formwork, concrete pouring, and roof work along with the safety measures to handle the various equipment in construction site so as to avoid the construction hazards.		
UNIT – I	SAFETY AT PRE-CONSTRUCTION STAGE	9 Periods	
Basic Terminologies – Safety, Hazard, Risk, Accident - Risk Planning and scheduling – Housekeeping – Safe access – Site safety – Basic checklist – Electrical Safety – Electrical power lines –Temporary Wiring – Overhead high-voltage and low-voltage electricity – Underground electrical hazards			
UNIT – II	SAFETY DURING CONSTRUCTION	9 Periods	
Personal Safety – Basic personal protective equipment and clothing – Eye and Face protection, Foot protection, Hand protection, Head protection and Hearing protection – Safety related work practices. Safety measures during Excavation – General requirements for trenches and excavations, Sloping and shoring requirements, Underground construction.			
UNIT – III	FORMWORK AND ROOFWORK	9 Periods	
Safety measures for Formwork – Slip forms – Working platforms – Materials Hoist – Concrete pouring and pumping – General framing – Guardrails – Floor and roof openings – Lifting appliances -Fall protection- Roof work – Roof jacks and toe-holds (slide guards) Scaffolds – General provision – Guardrails, Toe boards for scaffolds – Erection requirements – Wood scaffolds erection guidelines – Other types of scaffolds – Truss erection.			
UNIT – IV	EQUIPMENT SAFETY	9 Periods	
Ladders Safety – General requirements – Job-built ladders, Stepladders – Portable tools – Hand tools, Pneumatic tools, Power tools-saws – Compressed air for cleaning – Pneumatic nailing and stapling equipment, Construction site hazards.			
UNIT – V	CONSTRUCTION SAFETY PROGRAM	9 Periods	
Elements of effective safety program - Job safety analysis - Fault tree analysis - Job-site safety assessment - Safety regulations at construction sites - Human factors in construction safety - Safety meetings - Safety incentives - Safety training - Safety policy - Safety committees - Safety inspection - Safety audit.			
Contact Periods			
Lecture: 45 Periods Tutorial: 00 Periods Practical: 00 Periods Total: 45 Periods			

TEXT BOOKS:

1	<i>Bhattacharjee, S.K., “Safety Management in Construction”, Khanna Publishers, 2011.</i>
2	<i>Li, R.Y.M. & Poon, S.W. “Construction Safety”, Springer Publishers, 2015.</i>

REFERENCES:

1	<i>Jimmy W. Hinze, "Construction Safety", Prentice Hall Inc., 2012.</i>

3	<i>John Schaufelberger, "Construction Project Safety", Wiley Publications, 2013.</i>
4	<i>Indian Standard Codes: SP 70:2001, "Handbook on Construction Safety Practices", Bureau of Indian Standards, New Delhi.</i>

COURSE OUTCOMES: On completion of the course, the students will be able to:		Bloom's Taxonomy Mapped
CO1	Implement the basic safety measures during pre-construction work.	K2
CO2	Utilize the personal protective equipment in an appropriate manner and execute the safety precautions during construction stage.	K2
CO3	Assess the safety measures required during formwork, concreting work and roof work.	K3
CO4	Safely handle the equipment and tools for various construction works.	K3
CO5	Implement the safety policy in construction sector.	K3

25WPC6E1		FUNDAMENTALS OF REMOTE SENSING AND GIS APPLICATIONS			SEMESTER VI						
PREREQUISITES				CATEGORY	L	T	P	C			
NIL				PE	3	0	0	3			
Course Objectives	Familiarize the concepts and principles of various components of remote sensing, GIS and its practical applications in the fields of civil engineering, water resources, land use studies, soil science, Agriculture, forestry and Oceanography.										
UNIT – I	PRINCIPLES OF REMOTE SENSING				9 Periods						
Components of Remote Sensing – Energy, Sensor, Interacting Body - Active and Passive Remote Sensing – Platforms – Aerial and Space Platforms – Balloons, Helicopters, Aircraft and Satellites – Synoptivity and Repetivity – Electro Magnetic Radiation (EMR) – EMR spectrum – Visible, Infra-Red (IR), Near IR, Middle IR , Thermal IR and Microwave – Black Body Radiation - Planck’s law – Stefan-Boltzman law.											
UNIT – II	EMR INTERACTION WITH ATMOSPHERE AND EARTH MATERIALS				9 Periods						
Atmospheric characteristics – Scattering of EMR – Raleigh, Mie, Non-selective and Raman Scattering – EMR Interaction with Water vapour and ozone – Atmospheric Windows Significance of Atmospheric windows – EMR interaction with Earth Surface Materials – Radiance, Irradiance, Incident, Reflected, Absorbed and Transmitted Energy – Reflectance – Specular and Diffuse Reflection Surfaces- Spectral Signature – Spectral Signature curves – EMR interaction with water, soil and Earth Surface.											
UNIT – III	OPTICAL AND MICROWAVE REMOTE SENSING AND IMAGE PROCESSING				9 Periods						
Satellites - Classification – Based on Orbits – Sun Synchronous and Geo Synchronous – Based on Purpose – Earth Resources Satellites, Communication Satellites, Weather Satellites, Spy Satellites – Satellite Sensors - Resolution – Spectral, Spatial, Radiometric and Temporal Resolution – Description of Multi Spectral Scanning – Along and Across Track Scanners – Description of Sensors in Landsat, SPOT, IRS series – Current Satellites - Radar – Speckle – Back Scattering – Side Looking Airborne Radar – Synthetic Aperture Radar – Radiometer – Geometrical characteristics of digital image processing – Pre-processing image enhancement–Filtering–Classification.											
UNIT – IV	GEOGRAPHIC INFORMATION SYSTEM				9 Periods						
GIS – Components of GIS – Hardware, Software and Organizational Context – Data –Spatial and Non-Spatial – Maps – Types of Maps – Projection – Types of Projection - Data Input – Digitizer, Scanner – Editing – Raster and Vector data structures – Comparison of Raster and Vector data structure – Analysis using Raster and Vector data – Retrieval, Reclassification, Overlaying, Buffering – Data Output – Printers and Plotters.											
UNIT – V	SATELLITE IMAGERY AND GIS APPLICATIONS				9 Periods						
Application of satellite imagery – Merits – Limitations – Comparison with aerial photographs – Visual interpretation of satellite imagery – Elements of interpretation – Interpretation keys GPS and its Applications- Application of remote sensing and GIS in Surveying, Water resources exploration – Land use/Land cover studies – Geology –Agriculture, Disaster Management, Coastal zone Management and Environmental Engineering.											
Contact Periods:											
Lecture: 45 Period			Tutorial: 00 Period			Practical: 00 Period			Total: 45 Periods		

TEXT BOOKS:

3	<i>Burrough P.A, Principles of GIS for land resources assessment, Oxford, 2002.</i>
4	<i>Fundamentals of Remote sensing, S.C.Bhatia, Atlantic Publishers & Distributions (P) Ltd, 2008.</i>

COURSE OUTCOMES: On completion of the course, the students will be able to:		Bloom’s Taxonomy Mapped
CO1	Know the principles and methods of remote sensing.	K1
CO2	To gain the knowledge on electromagnetic radiation waves interaction with materials.	K2
CO3	Apply the concept of satellite remote sensing, Data acquisition and image processing.	K2
CO4	Categorize the hardware and software of GIS.	K3
CO5	Utilize the application of GIS in the areas of water resources, land use studies, soil science, Agriculture, forestry and Oceanography.	K3

25WPC6E2	ENERGY CONSERVATION TECHNIQUES IN CONSTRUCTION	SEMESTER VI
-----------------	---	--------------------

PREREQUISITES	CATEGORY	L	T	P	C
NIL	PE	3	0	0	3

Course Objective	To facilitate learners to understand sustainable building designs and its parameters such as energy and water efficiency, Comfort in buildings, and waste management.		
UNIT – I	INTRODUCTION TO SUSTAINABILITY AND HEAT TRANSFER IN BUILDING	9 Periods	
Overview of Sustainability and Green buildings, Selection of site – preservation and planning, Influence of climate on buildings, Basics of climatology, Earth – Sun relationship, Solar angles and sun path diagram, Design of shading systems. Basics of Thermodynamics, Convection/radiation heat transfer, Heat gain through various elements of a building.			
UNIT – II	INDOOR ENVIRONMENTAL QUALITY MANAGEMENT	9 Periods	
Thermal comfort – Psychrometry and its applications, Thermal comfort models and case studies Acoustics – Building acoustics, measures, defects and prevention of sound transmission. Indoor Air Quality – Effects, design consideration and integrated approach for IAQ management. Visual comfort – Enhancement strategies for Daylighting and Artificial lighting.			
UNIT – III	RESOURCE MANAGEMENT IN BUILDING	9 Periods	
Energy efficiency – Energy efficiency in building envelope, energy simulation, Energy management system – lighting and renewable energy and Energy Audit. Water Efficiency – Planning and design of water management system, Rain water harvesting, Water efficient design and fixtures, Treatment and reuse and Water efficient landscape system.			
UNIT – IV	WASTE MANAGEMENT IN BUILDING	9 Periods	
Waste management – Types of waste and its treatment methods, Construction and demolition waste management, Waste management in residential, commercial buildings, healthcare facilities. Materials – Green product certifications, Features of sustainable building materials and sustainable alternatives.			
UNIT – V	LIFE CYCLE ASSESSMENT AND RATING SYSTEM	9 Periods	
Life cycle assessment and its types – Modelling and Analysis, Greenhouse gas emission. Different phases of Green building project management. Green building rating systems- LEED, BREEAM and others, Indian Green building rating systems – IGBC & GRIHA, IGBC criteria for certification.			
Contact Periods:			
Lecture: 45 Periods Tutorial: 00 Periods Practical: 00 Periods Total: 45 Periods			

TEXT BOOK :

4	Ganesan T P, “ <i>Energy Conservation in Buildings</i> ”, ISTE Professional Center, Chennai,1999.

COURSE OUTCOMES: On completion of the course, the students will be able to:		Bloom's Taxonomy Mapped
CO1	Comprehend sustainable design, climatology, shading system and analyze heat transfer mechanism in buildings.	K2
CO2	Assess the design considerations and parameters for thermal comfort, visual comfort, indoor air quality and acoustics.	K2
CO3	Identify solutions for energy efficiency and water efficiency	K2
CO4	Assess the various waste management in buildings	K2
CO5	Outline the life cycle assessment and rating system	K2

25WPC6E3	MAINTENANCE AND REHABILITATION OF STRUCTURES	SEMESTER VI
-----------------	---	--------------------

PREREQUISITES	CATEGORY	L	T	P	C
NIL	PE	3	0	0	3

Course Objective	To make the students to inspect the distressed structures and apply the suitable repair materials and rehabilitation techniques.	
UNIT – I	MAINTENANCE AND REPAIR STRATEGIES	9 Periods
Maintenance - repair and rehabilitation - Facets of Maintenance - Importance of Maintenance - Various aspects of Inspection - Assessment procedure for evaluating a damaged structure – Causes of deterioration.		
UNIT – II	REPAIR FOR DISTRESSED MEMBERS	9 Periods
Types, Causes and effects of cracks – effects due to corrosion, climate, temperature, chemicals and aggressive environment - Cover thickness requirements - Repairs to overcome deflection, cracking, chemical disruption, corrosion, wear, fire, leakage and marine exposure.		
UNIT – III	MATERIALS AND SPECIAL CONCRETE FOR REPAIR	9 Periods
Selection of Materials- Admixtures used as repair materials - Concrete chemicals - Expansive cement - Ferro cement - FRP sheet, Fibre composites - special concrete: Sulphur infiltrated concrete - High strength concrete - Foamed concrete – Geopolymer concrete, Reactive powder concrete - Vacuum concrete.		
UNIT – IV	REPAIR AND CORROSION TECHNIQUES	9 Periods
Non-destructive Testing Techniques – load test for stability - Epoxy injection - Guniting and Shotcreting – Shoring and Underpinning - Corrosion protection techniques – Corrosion inhibitors, Corrosion resistant steels, Coatings to reinforcement, cathodic protection.		
UNIT – V	REHABILITATION AND STRENGTHENING TECHNIQUES	9 Periods
Strengthening of Super Structures - Jacketing - Reinforcement addition, Plating, Conversion to composite construction - Post stressing - Strengthening of substructures – Case studies: Transportation of structures from one place to other - Demolition Techniques – Engineered demolition methods – automated demolition techniques.		
Contact Periods:		
Lecture: 45 Periods Tutorial: 0 Periods Practical: 0 Periods Total: 45 Periods		

TEXT BOOKS:

1	<i>Dr. B. Vidivelli, “Rehabilitation of concrete structures”, Standard Publishers, 2021</i>
2	<i>Hand Book on “Repairs and Rehabilitation of RCC Buildings” Central Public Works Department, Govt. of India, New Delhi, 2011.</i>

REFERENCES:

1	<i>Bhattecharjee, “Concrete Structures Repair Rehabilitation and Retrofitting”, CBS Publishers and Distributors, New Delhi, 2019.</i>
2	<i>Poonam I. Modi, Chirag N. Patel, “Repair & Rehabilitation of Concrete Structures”, PHILearning Pvt. Ltd., New Delhi, 2016.</i>

4	<i>M. S. Shetty, “Concrete Technology – Theory and Practice”, S. Chand and Company, New Delhi, 2019.</i>

COURSE OUTCOMES: Upon completion of the course, the students will be able to:		Bloom's Taxonomy Mapped
CO1	Identify the causes of deterioration and evaluate a damaged structure.	K2
CO2	Do repair works for distressed members in a structures.	K3
CO3	Propose the appropriate materials and concrete for various repair conditions.	K3
CO4	Execute various techniques for repair and protection methods.	K3
CO5	Rehabilitate and strengthen the various elements of a structure subjected to deterioration.	K3

25WPC6E4	AIR POLLUTION MANAGEMENT	SEMESTER VI
-----------------	---------------------------------	--------------------

PREREQUISITES	CATEGORY	L	T	P	C
NIL	PE	3	0	0	3

Course Objectives	Aimed at imparting knowledge of sources and effects of air pollution and to understand the control measure adopted for removal of air pollutant.		
UNIT – I	FUNDAMENTAL OF AIR POLLUTION	9 Periods	
Atmosphere as a place of disposal of pollutants – Definition- Air Pollution – Air Pollutants – Source and classification of pollutants – Units of measurements of pollutants -Ambient air quality standards - Air pollution indices - Air pollution and its effects on human beings, plants and animals - Economic effects of air pollution – Air Pollution Episodes.			
UNIT – II	METEOROLOGY AND SAMPLING OF AIR POLLUTION	9 Periods	
Meteorology - temperature lapse rate– Adiabatic lapse rate – Wind Rose - Inversion – Wind velocity and turbulence –Atmospheric stability and mixing heights, Plume behavior – Windrose. Ambient air sampling and measurement of particulate and gaseous pollutants Environmental factors - Stack sampling - Plume behaviour - Dispersion of air pollutants - Maximum mixing depth - Estimation of plume rise - Stack design.			
UNIT – III	CONTROL OF PARTICULATE CONTAMINANTS	9 Periods	
Factors affecting Selection of Control Equipment – Working Principle of Gravity Separators, cyclones, Fabric filters, Particulate Scrubbers, Electrostatic Precipitators – Operational Considerations.			
UNIT – IV	CONTROL OF GASEOUS CONTAMINANTS	9 Periods	
Factors affecting Selection of Control Equipment – Working principle of absorption, Adsorption, condensation, Incineration, Bio scrubbers, Bio filters - Operational Considerations			
UNIT – V	INDOOR AIR QUALITY	9 Periods	
Sources, types and control of indoor air pollutants, sick building syndrome and Building related illness Sources and Effects of indoor air Pollution – Measurement – Standards –Control and Preventive measures.			
Contact Periods: 45			
Lecture: 45 Periods Tutorial: 00 Periods Practical: 00 Periods Total: 45Periods			

TEXTBOOKS:

1	Noel de Nevers, “ <i>Air Pollution Control Engineering</i> ”, Waveland press, Inc 2017.
2	Dr. Y. Anjaneyulu, “ <i>Air Pollution: Prevention and Control Technologies</i> ”, BS publications (P) Ltd., 2nd edition, 2020.

REFERENCES:

1	Noel de Nevers, " Air Pollution Control Engg ", McGraw Hill, New York, 2016.
2	Air Pollution, Climate Change, and Human Health in Indian Cities: A Brief Review, August 2021

4	M.N Rao and HVN Rao, " Air Pollution ", TataMcgraw Hill Publishing Company limited, 2007.

COURSE OUTCOMES: On completion of the course, the students will be able to:		Bloom's Taxonomy Mapped
CO1	Extract the status of global and analysis of air pollutant scenario and their effects.	K2
CO2	Classify the meteorological condition to prevail for the dispersion air pollution.	K2
CO3	Implement the concepts of control strategies adopted for removal of Particulate pollutants.	K2
CO4	Implement the concepts of control strategies adopted for removal of gaseous pollutants.	K2
CO5	Identify the causes of indoor air pollution and their effects.	K2

25WPC6E5	PAVEMENT ENGINEERING	SEMESTER VI
----------	----------------------	-------------

PREREQUISITES	CATEGORY	L	T	P	C
NIL	PE	3	0	0	3

Course Objective	To gain knowledge on various IRC guidelines for designing flexible, rigid pavements, to assess the quality, serviceability conditions of roads, evaluation of pavements and strengthening methods.		
UNIT – I	BASIC CONCEPTS	9 Periods	
Pavement – Types and components – Functions of components - Historical developments – Approaches to pavement design–Vehicle traffic considerations– Behaviour of road materials under repeated loading consideration–Stresses and deflections in Layered systems.			
UNIT – II	FLEXIBLE PAVEMENT	9 Periods	
Factors affecting flexible pavement–Various approaches to design – Empirical, Semi-empirical and theoretical methods – Applications of different pavement design methods- Design procedure as per IRC design guidelines–Failure criteria for bituminous pavements.			
UNIT – III	RIGID PAVEMENT	9 Periods	
Cement concrete pavement–Factors affecting CC Pavement – Modified Westergaard approach–Design procedure as per IRC design guidelines– Types of joints and their functions– Design of joints.			
UNIT – IV	PAVEMENT MATERIALS	9 Periods	
Pavement materials – Aggregate characteristics and tests – Crushing – Abrasion – Impact Tests – Water absorption – Flakiness and Elongation indices. Field compaction – Rammers – Rollers – Compaction control – In-situ density — Bitumen Emulsion and cutback –Preparation and characteristics uses and tests, mechanism of stripping, adhesion failure–. Bituminous mixes: preparation, design and testing.			
UNIT – V	EVALUATION AND REHABILITATION	9 Periods	
Pavement evaluation – Distress in flexible and rigid pavements –Evaluation based on surface appearance, Cracks, Patches, potholes and skid resistance - Structural evaluation – Evaluation by deflection measurements - Present Serviceability Index — Strengthening of pavements –Flexible and rigid overlays.			
Contact Periods:			
Lecture: 45 Periods		Tutorial: 00 Periods	Practical: 00 Periods Total: 45 Periods

TEXT BOOK:

1	S.K.Khanna, C.E.G.Justo and Dr.A.Veeraraghavan, “Highway Engineering” , Khanna Publishers,Tenth Edition,2024.
2	Yoder, E.J and Witchak, M.W, “Principles of Pavement Design” , e print, Newyork wiley, 2018.

REFERENCES :

1	Kadiyali, L.R and N.B.Lal., “Transport planning & Traffic Engineering” , Khanna Publishers,2024.
2	S.K Sharma, “Principles, Practice and Design of Highway Engineering” , S. Chand & Co.,Ltd., New Delhi, 2014.
3	Guidelines for the Design of Flexile Pavements , IRC: 37-2018, The Indian roads congress, New Delhi
4	Guidelines for the Design of Plain Jointed Rigid Pavements for Highways , IRC: 58-2020, The Indian Roads Congress, New Delhi
5	IRC SP20-2002, Design and specification of Rural Roads (Manual) , Ministry of rural roads, Government of India, New-Delhi, Reprint 2013.

COURSE OUTCOMES: On completion of the course, the students will be able to:		Bloom's Taxonomy Mapped
CO1	Explore the pavement categories, aspects, and stresses in flexible pavement.	K3
CO2	Implement different methods when designing flexible pavements.	K3
CO3	Analyze the stresses and apply IRC standards for rigid pavement design.	K2
CO4	Develop adequate knowledge of the different quality control tests.	K1
CO5	Evaluate the various pavement distresses and strengthening techniques.	K2

25WPC7E1	ADVANCED CONCRETE DESIGN	SEMESTER VII
-----------------	---------------------------------	---------------------

PREREQUISITES	CATEGORY	L	T	P	C
25WPC403 BASIC STRUCTURAL DESIGN II (CONCRETE)	PE	3	0	0	3

Course Objectives	To create an awareness on yield line theory of slabs, design principles of Grid floors, ribbed slabs, bunkers, silos, slender columns, RC walls, bridges and deep beams.	
UNIT – I	YIELD LINE THEORY OF SLABS AND INELASTIC BEHAVIOUR OF CONCRETE BEAMS	9 Periods
Yield line theory - Assumptions made in Analysis – Analysis of Isotropically and Orthotropically Reinforced Slabs – Virtual Work Method and Equilibrium Method. Inelastic Behavior of Concrete Beams Moment Rotation Curves–Moment Redistribution		
UNIT – II	DESIGN OF SPECIAL RC ELEMENTS	9 Periods
Design of slender columns – Braced and Unbraced Columns – Design Considerations of RC walls–Design of Deep Beams.		
UNIT – III	GRID FLOORS AND RIBBED SLABS	9 Periods
Grid floors– Design Principles– Analysis of Grid Floor by Approximate Method–Ribbed Slabs–Analysis and Design of Ribbed Slab for Moment and Shear.		
UNIT – IV	BUNKERS AND SILOS	9 Periods
Design of Bunkers – Design of Silo – Detailing of Reinforcements.		
UNIT – V	DESIGN OF BRIDGES	9 Periods
Types of Bridges – IRC Loadings – Design of Single Span Slab Bridge Deck for Class A Loading– Design of T – Beam Bridge for Class AA Loading.		
Contact Periods		
Lecture: 45 Periods Tutorial: 00 Periods Practical: 00 Periods Total: 45 Periods		

TEXT BOOKS:

1	<i>Varghese.P.C, “Advanced Reinforced Concrete Design”, Prentice Hall of India Private Ltd, New Delhi, 2010.</i>
2	<i>Krishnaraju, “Advanced Reinforced Concrete Design–S.Iunits”, C.B.S., New Delhi, 2020.</i>

REFERENCES:

1	<i>IS456-2000, “Indian standard code of practice for plain and reinforced concrete”, BIS, New Delhi.</i>
2	<i>SP34(1987), “Hand book on Concrete Reinforcement and Detailing”, BIS, New Delhi.</i>
3	<i>IRC6–2014, Standard Specifications and Code of Practice for Road Bridges</i>
4	<i>Pillai, S. U. and Menon, D, “Reinforced Concrete Design”, Tata McGraw Hill, 2021</i>
5	<i>DayaratnamP., “Design of Reinforced Concrete Structures”, Oxford & IBH publishing Co.Pvt.Ltd., 2017.</i>
6	<i>Subramanian N, “Design of Reinforced Concrete Structures”, Oxford University Press, 2014.</i>

COURSE OUTCOMES:		Bloom's
On completion of the course, the students will be able to:		Taxonomy Mapped
CO1	Analyse slabs using yield line theory and know the concepts of inelastic behavior of beams.	K2
CO2	Analyse and design slender columns, RC walls and deep beams as per Indian Standards.	K3
CO3	Design Grid floors and ribbed slabs using various methods.	K3
CO4	Design bunkers and silos and provide appropriate detailing of reinforcements.	K3
CO5	Perform analysis and design of bridges as per Indian Standards.	K3

25WPC7E2	PROFESSIONAL PRACTICES, ETHICS AND BUILDING BYE-LAWS	SEMESTER VII
-----------------	---	---------------------

PREREQUISITES	CATEGORY	L	T	P	C
NIL	PE	3	0	0	3

Course Objective	To create an awareness on Human Values, Engineering Ethics, contracts management, various legal aspects related to Civil Engineering and the knowledge of Building byelaws.		
UNIT – I	HUMAN VALUES AND PROFESSIONAL ETHICS		9 Periods
Introduction human values – Morals – Civic virtue – Ethics – Work ethics – Engineering Ethics – Professional Ethics – Business Ethics – Corporate Ethics – Engineering Ethics – Personal Ethics – Code of Ethics by Institution of Engineers (India) – Uses of Ethical Theories – Profession and Professionalism – Professional Responsibility – Conflict of Interest – Gift Vs Bribery – Environmental breaches – Negligence – Deficiencies in state of the art – Vigil Mechanism – Whistle blowing – Protected disclosures.			
UNIT – II	PROFESSIONAL PRACTICES		9 Periods
Respective roles of various stakeholders: Government (constituting regulatory bodies and standardization organizations, prescribing norms to ensure safety of the citizens) – Standardization Bodies (BIS, IRC) (formulating standards of practice) –Professional bodies (Institution of Engineers (India), Indian Roads Congress, IIA/ COA, ECI, Local Bodies / Planning Authorities) (certifying professionals and offering platforms for interaction) –Clients/ owners (role governed by contracts) – Developers (role governed by regulations such as RERA) –Consultants (role governed by bodies such as CEAI) –Contractors (role governed by contracts and regulatory Acts and Standards) – Manufacturers/ Vendors/ Service agencies (role governed by contracts and regulatory Acts and Standards).			
UNIT – III	CONTRACT, LABOUR AND CONSTRUCTION LAW		9 Periods
Indian Contract Act, 1872 and amendments – General principles of contracting – Contract formation and law – Privity of contract – Industrial Disputes Act, 1947 – Industrial Employment (Standing Orders) Act, 1946 – Employees’ Compensation Act, 1923 – Building and Other Construction Workers (Regulation of Employment and Conditions of Service) Act, 1996 and Rules, 1998 – Real Estate (Regulation and Development) Act (RERA), 2016 – National Building Code of India (NBC), 2016.			
UNIT – IV	ARBITRATION AND INTELLECTUAL PROPERTY RIGHTS		9 Periods
Arbitration – Matters relating to arbitration – Kinds of Arbitration– Arbitrator – Appointment, powers, disabilities – Arbitration agreements – Process – Arbitration Award – Dispute Resolution Methods. Intellectual Property Rights (IPR): Introduction – Forms of IP – Law relating to Copyright in India– Patentable inventions – Process of obtaining patents – Law and policy relating to Patents – Infringement and related remedies.			
UNIT – V	BUILDING BYE-LAWS		9 Periods
General – Objective – Importance – Applicability – Principles – Standard guidelines of building elements – Provisions for access, lighting and ventilation, fire protection, drainage and sanitation – Requirements for parking, Landscaping, low-income housing – Building bye-laws for various types of buildings.			
Contact Periods: Lecture: 45 Periods Tutorial: 0 Periods Practical: 0 Periods Total: 45 Periods			

TEXT BOOKS:

1	<i>Qin Zhu, Mike W. Martin, Roland Schinzinger, “Ethics in Engineering”, McGraw Hill, 5th Edition, New Delhi, 2024.</i>
2	<i>Dr.Kumaraswamy, A.K.Kameswara Rao, “Building Planning and Drawing”, Charotar Publishing Housing Pvt. Ltd., 2019.</i>

REFERENCES:

1	Mike W. Martin and Roland Schinzinger, <i>“Ethics in Engineering”</i> , Tata McGraw Hill, New Delhi, 2022.
2	Neelima Chandiramani, <i>“The Law of Contract: An Outline”</i> , Avinash Publications Mumbai, 2020.
3	T. Ramappa, <i>“Intellectual Property Rights Law in India”</i> , Asia Law House, 2020.
4	National Building Code of India, <i>“NBC 2016”</i> , Bureau of Indian Standards, New Delhi, 2016.

COURSE OUTCOMES: Upon completion of the course, the students will be able to:		Bloom's Taxonomy Mapped
CO1	Apply the knowledge of Human Values and Professional ethics.	K2
CO2	Describe various professional practices and roles of various stakeholders.	K2
CO3	Implement the Contract, Labour and Construction Laws in Civil Engineering profession.	K3
CO4	Apply the knowledge on Arbitration and Intellectual Property Rights.	K2
CO5	Develop good insight into Building by-laws.	K2

25WPC7E3	AIRPORT, DOCKS AND HARBOUR ENGINEERING	SEMESTER VII
-----------------	---	---------------------

PREREQUISITES	CATEGORY	L	T	P	C
NIL	PE	3	0	0	3

Course Objectives	To explore the planning aspect, components design and construction of Airport, Docks and Harbour.		
UNIT – I	AIRPORT PLANNING AND RUNWAY	9 Periods	
Air transport-development in India – AAI-ICAO, Aircraft characteristics. Airport Planning Regional planning-site selection – surveys- estimation of air traffic needs. Airport Obstructions – Classification- Approach zone-turning zone. Runways – Orientation – Wind rose diagram - Basic runway length-corrections – Geometric Design-runway patterns.			
UNIT – II	TAXIWAY AND AIRPORT LAYOUTS	9 Periods	
Taxiway – Geometric design –exit taxiway-holding apron. Airport layouts - Apron –Hangars - Terminal buildings - Airports buildings - Passenger flow -Passenger facilities.			
UNIT – III	VISUAL AIDS, PAVEMENTS AND AIRPORT DRAINAGE	9 Periods	
Visual Aids – Runway and Taxiway Markings-Runway and Taxiway Lightings - Air Traffic Control – Basic Actions. Runway pavements – types (Introduction) – construction (no design problems) - Failures of runway pavement – maintenance. Airport drainage (Introduction only).			
UNIT – IV	HARBOUR, PORTS AND DOCKS	9 Periods	
Water transportation – Introduction. Tides. Harbour – classification – site selection Port – classification- Requirements-facilities. Docks – wet docks – dry docks.			
UNIT – V	BREAK WATER, NAVIGATIONAL AIDS AND DREDGING	9 Periods	
Break water-Types-construction methods. Berthing structures – quays, piers, wharves, dolphins, jetties, fenders. Navigational aids- Necessity-Light houses –signals-Mooring- Mooring accessories. Dredging-Types.			
Contact Periods: Lecture: 45 Periods Tutorial: 0 Periods Practical: 0 Periods Total: 45 Periods			

TEXT BOOKS:

1	<i>S. K. Khanna, M. G. Arora, S. S. Jain “Airport planning and design”, Nem Chand and bros, 2012.</i>
2	<i>Srinivasan.R., “Harbour, Docks and Tunnel Engineering”, Chartor publishing house, Anand, India,2013.</i>

REFERENCES:

1	<i>Rangwala , "Airport Engineering", 13th Edition, Charotar Publishing House Pvt. Ltd, Anand India, 2012.</i>
2	<i>Vazirani.V.N and Chandola.S.P., “Transportation and Engineering, Vol.2”, Khanna publishers, New Delhi,2005.</i>
3	<i>Subramanian K.P., "Highways, Railways, Airport and Harbour Engineering", Scitech Publications (India), Chennai,2010.</i>
4	<i>Hasmukh P. Oza, Gautam H. Oza, “Dock And Harbour Engineering”, 8th Edition,Charator publishing house private limited, Gujarat, 2016.</i>

COURSE OUTCOMES: On completion of the course, the students will be able to:		Bloom's Taxonomy Mapped
CO1	Prepare the select appropriate site for airport and design of runway.	K3
CO2	Plan the airport layout and selection of components of airport.	K3
CO3	Identify the visual aids of airport and also able to construct and maintenance of runway.	K2
CO4	Prepare the layout and design of harbor, ports and dock	K3
CO5	Categorize the protection and berthing structures	K2

25WPC7E4	IOT PLATFORM FOR SMART CITY PLANNING		SEMESTER VII			
PREREQUISITES		CATEGORY	L	T	P	C
NIL		PE	3	0	0	3
Course Objective	To develop basic IOT functional and networking aspects, their role in Smart Cities, apply the basic needs and planning concept to solve various Infrastructure problems using sustainable and intelligent solutions.					
UNIT – I	INTERNET OF THINGS					9 Periods
Introduction to Internet of Things, Genesis of IoT, IoT and Digitization, IoT Impact, Convergence of IT and IoT, IoT Challenges, IoT Network Architecture and Design, Drivers Behind New Network Architectures, Comparing IoT Architectures – Sensors/Devices, Connectivity, Data Processing.						
UNIT – II	IOT STANDARDS AND SMART CITIES					9 Periods
Introduction to smart cities - Definition, dimensions and scope of Smart Cities –Global Standards and Performance Benchmarks, Practice Code. India “100 Smart Cities” Policy and Mission – Worldwide policies for smart cities - Government of India policy for smart city, Mission statement & guidelines, Smart cities in India.						
UNIT – III	ADVANCEMENT IN SMART CITY INFRASTRUCTURE					9 Periods
Energy and ecology, solar energy for smart cities - Housing, sustainable green building, safety, security, disaster management, economy, cyber security, Project management - Storage and conveyance systems of water, sustainable water and sanitation, sewerage system, flood management, conservation system.						
UNIT – IV	SMART TRANSPORT PLANNING					9 Periods
Introduction to smart transport, Intelligent transportation system (ITS), GIS and GPS positioning Navigation and Identification system, Smart Automobiles and sustainable fuels, smart pedestrian walkways and cycle tracks, solar roads, electronic fee payment technology, electronic speed determination technology, and smart signaling technology.						
UNIT – V	IOT APPLICATIONS IN SMART CITIES					9 Periods
IoT applications in smart energy systems – Smart water management – Smart parking and mobility – Smart metering and lighting as a service – Smart solid waste management – Smart governance and citizen services – Case studies of Indian and global smart city initiatives.						
Contact Periods:						
Lecture: 45 Periods		Tutorial: 0 Periods		Practical: 0 Periods		Total: 45 Periods

TEXT BOOKS:

1	<i>Surjeet Dalal, Vivek Jaglan, Dac-Nhuong Le, “Green Internet of Things for Smart Cities: Concepts, Implications, and Challenges (Green Engineering and Technology)”, CRC Press, 1st Edition, 2024.</i>
2	<i>Vincenzo Piuri, Rabindra Nath Shaw, Ankush Ghosh, “AI and IoT for Smart City Applications (Studies in Computational Intelligence, 1002)”, Springer, 1st edition, 2022.</i>

4	<i>Gerardus Blokdyk, “Smart City a Complete Guide, 5STARCOoks, 2019 Edition, 2021.</i>

COURSE OUTCOMES: Upon completion of the course, the students will be able to:		Bloom's Taxonomy Mapped
CO1	Summarize the concepts of the IoT.	K2
CO2	Interpret IOT standards to plan smart cities.	K3
CO3	Identify components and techniques of infrastructure in smart city planning.	K3
CO4	Develop smart transport systems for smart cities.	K2
CO5	Formulate smart city plans using IOT in different sectors.	K2

25WPC7E5	TOWN PLANNING AND ARCHITECTURE	SEMESTER VII
-----------------	---------------------------------------	---------------------

PREREQUISITES	CATEGORY	L	T	P	C
NIL	PE	3	0	0	3

Course Objectives	To study and analyse the various typologies of housing related to Architectural design, area distribution and various land uses of a housing layout.		
UNIT – I	TOWN PLANNING	9 Periods	
History of evolution of town- Town and environment – Elements of city plan- Importance of Climate, humidity, wind and radiation - surveys and data collection – Residential neighbourhood – Industrial areas – Public buildings – Housing and slum clearance.			
UNIT – II	BUILDING RULES AND GUIDELINES	9 Periods	
General – Zoning regulation – regulation regarding layouts – master plan – regional plan- structural plan – building regulations-Rules for special types of buildings- Floor space index- minimum plot size and building front age- Open spaces- Minimum standard dimensions of building elements- Provision for lighting and ventilation- Provision for means of access - Land use classification- Town planning standards.			
UNIT – III	ELEMENTS OF ARCHITECTURE	9 Periods	
Introduction of Architecture- Definition- factors influencing architectural development - Mass and Space visual effects of geometric forms and their derivatives- The sphere, the cube, the pyramid, the cylinder and cone- The aesthetic qualities of Architecture- Proportion, scale, balance, symmetry, rhythm and axis-contrast in form- Harmony.			
UNIT – IV	PRINCIPLES OF ORIENTATION AND PLANNING OF BUILDINGS	9 Periods	
General- Factors affecting orientation- Sun- Wind- Rain- Orientation criteria for Indian conditions- Principles governing the theory of planning- Planning of Residential buildings- Electrification of buildings ,Intelligent buildings.			
UNIT – V	INTRODUCTION TO INTERIOR DESIGN	9 Periods	
General – decorative materials – cement Bonded Board (BISTON PANEL), water proof cement paint, Industrial glazing and Roofing, unit masonry, plaster and dry wall, Wall surface materials, Effect of colour on architecture- Home furnishing- Plans in rooms. Estimation, specifications, valuations, professional practices, House furnishing-Plans in rooms.			
Contact Periods:			
Lecture: 45 Periods Tutorial: 0 Periods Practical: 0Periods Total:45 Periods			

TEXT BOOK

1	Margaret Roberts, “ <i>An Introduction to Town Planning Techniques</i> ”, Hutchinson, London, 1990.
2	Edward D. Mills, “ <i>Planning the Architects Handbook</i> ”, Butterworth London, 1995.

REFERENCES

1	Hiraskar, G.K., " Fundamentals of Town Planning ", Dhanpat Rai Publications, 1992.
2	NBC, local town planning authority rules and regulations
3	Francis D.K. Ching, " Architecture: Form, Space and order ", VNR, N.Y., 1999.
4	A.Bandopadhyay, " Town Planning ", Books and Allied, Calcutta 2000

COURSE OUTCOMES: On completion of the course, the students will be able to:		Bloom's Taxonomy Mapped
CO1	Describe the importance of various components of town planning.	K2
CO2	Execute the town planning standards and guidelines.	K3
CO3	Apply the suitable elements in architectural design.	K3
CO4	Plan a building based on orientation criteria.	K3
CO5	Select the decorative materials for interior design.	K3

25WPC7E6	BASICS OF DYNAMICS AND ASEISMIC DESIGN OF STRUCTURES	SEMESTER VII
-----------------	---	-------------------------

PREREQUISITES	CATEGORY	L	T	P	C
• 25WPC103 ENGINEERING MECHANICS • 25WPC503 CONCRETE STRUCTURES	PE	3	0	0	3

Course Objective	To understand the behaviour of structures under dynamic, earthquake loading and design the structures as earthquake resistant as per codal provisions.		
UNIT – I	FREE VIBRATION SYSTEM	9 Periods	
Concept of inertia and damping – Types of damping – Difference between static forces and dynamic excitation –Degrees of freedom – D’Alemberts Principles – SDOF idealization – Equations of motion of SDOF system of mass as well as base excitation – Free vibration of damped and undamped structures			
UNIT – II	FORCED VIBRATION SYSTEM	9 Periods	
Forced vibration of damped and undamped structures – Response to harmonic excitation – Force Transmission - Periodic loading– Impulse and response to unit impulse– Measurement of Damping - Duhamel integral.			
UNIT – III	MULTIPLE DEGREE OF FREEDOM SYSTEM	9 Periods	
Two degree of freedom system – Normal modes of vibration – Natural frequencies – Mode shapes – Introduction to MODF systems – Decoupling of equations of motion – Concept of mode superposition (No derivations).			
UNIT – IV	ELEMENTS OF SEISMOLOGY AND SEISMIC DESIGN CONCEPT	9 Periods	
Elements of Engineering Seismology – Definitions, Introduction to Seismic hazard, Earthquake phenomenon – Seismotectonics – Seismic Instrumentation – Effect of earthquake on different types of structures – Behaviour of RCC, Steel and prestressed Concrete Structures under earthquake loading- Soil Structure Interaction – Liquefaction of soils – Concept of earthquake resistant design – Guide lines for seismic resistant construction			
UNIT – V	DESIGN METHODOLOGY & SEISMIC MITIGATION	9 Periods	
Importance of ductility – Methods of introducing ductility into RC structures - Response and design spectra – Design earthquake - IS 1893, IS 13920 and IS 4326 – Codal provisions – Design as per the codes – Base isolation techniques – Vibration control measures – Important points in mitigating effects of earthquakes on structures.			
Contact Periods:			
Lecture: 45 Periods Tutorial: 00 Periods Practical: 00 Periods Total: 45 Periods			

TEXT BOOKS :

COURSE OUTCOMES: On completion of the course, the students will be able to:		Bloom's Taxonomy Mapped
CO1	Analyze the dynamic response of SDOF System under free vibration	K2
CO2	Determine response of SDOF system under forced Condition	K2
CO3	Illustrate the mode shapes of MDOF System subjected to different types of vibration	K3
CO4	Explain the behaviour of structure under seismic load and its design concept	K2
CO5	Apply Indian codal provisions in the planning, design and detailing of structures	K3

25WPC7E7	GROUND IMPROVEMENT TECHNIQUES	SEMESTER VII
----------	-------------------------------	--------------

PREREQUISITES	CATEGORY	L	T	P	C
25WPC304-GEOTECHNICAL ENGINEERING - I	PE	3	0	0	3

Course Objective	To study different methods of improvement and to select the appropriate methods based on the soil type and ground conditions.		
UNIT – I	DEWATERING	9 Periods	
Scope and necessity- Engineering properties of soft and compressible deposits – Classification of ground modification techniques – Emerging trends in ground improvement-Selection based on soil conditions – Dewatering by well point system – Deep well-Vacuum and Electro - Osmotic method.- Heat treatment-ground freezing.			
UNIT – II	COMPACTION AND VERTICAL DRAINS	9 Periods	
In-situ densification of granular soils and consolidation of cohesive soils – Shallow and deep compaction – Vibration methods – Vibrocompaction- Blasting- Vibroflotation – precompression and compaction piles –Heavy Tamping – Preloading -Vertical drains – Sand drains, Wick drains –Relative merits and limitations.			
UNIT – III	STONE COLUMN AND CONSOLIDATION	9 Periods	
Stone columns - lime piles-micropiles – Construction methods – merits and demerits – Pre-compression and consolidation – simple design-Dynamic consolidation – Electro-osmotic consolidation –Soil reinforcement – Geosynthetics-types –Applications-filtration – drainage – separation – reinforcement – Soil Nailing-Rock bolting.			
UNIT – IV	STABILIZATION AND CONFINEMENT	9 Periods	
Stabilization methods – Mechanical, Chemical stabilization-Cement, Lime, fly ash and Bitumen – Electro - kinetic stabilization – Stabilization of expansive clays-Stabilization using Industrial wastes. Concept of confinement, Gabion walls, Crib walls and fabric form work.			
UNIT – V	GROUTING	9 Periods	
Types of grouts – Suspension and solution grouts –Basic requirements – Displacement grouting – Compaction grouting – Permeation grouting –Cement grouting-Lime grouting-Grouting equipment and methods – Grout monitoring schemes.			
Contact Periods:			
Lecture: 45 Periods Tutorial: 00 Periods Practical: 00 Periods Total: 45 Periods			

TEXT BOOKS:

1	<i>Purushothama Raj, P., “Ground Improvement Techniques”, Laxmi Publications (P) Ltd., New Delhi, 2005</i>
2	<i>Nihar Ranjan Patra., “Ground Improvement Techniques”, Vikas publishing House Pvt. Ltd., 2012.</i>

REFERENCES:

1	Day, R. W., <i>“Foundation Engineering Handbook”</i> , Mc-Graw Hill Companies, Inc. 2006.
2	Manfred R. Hausmann <i>“Engineering Principles of ground modification”</i> , Mc Graw Hill, 2013.
3	Peter G. Nicholson, <i>“Soil Improvement and Ground Modification Methods”</i> , Butterworth Heinemann, 2015.
4	Klaus Kirsch and Alan Bell, <i>“Ground Improvement,” Third Edition</i> , CRC Press, Taylor and Francis Group, 2013.

COURSE OUTCOMES:

On completion of the course, the students will be able to:

		Bloom's Taxonomy Mapped
CO1	Select suitable ground improvement techniques and different dewatering techniques based on soil conditions.	K2
CO2	Assess various in-situ treatment of cohesionless and cohesive soils.	K2
CO3	Perform in the field with the use of stone column and earth reinforcement.	K2
CO4	Identify and adopt suitable stabilization methods.	K2
CO5	Select and apply different grouting techniques.	K2

25WPC7E8	HOUSING PLANNING AND MANAGEMENT	SEMESTER VII
-----------------	--	---------------------

PREREQUISITES	CATEGORY	L	T	P	C
NIL	PE	3	0	0	3

Course Objectives	to have a comprehensive knowledge of planning, design, evaluation, construction and financing of housing projects in sustainer manner.		
UNIT – I	INTRODUCTION TO HOUSING	9 Periods	
Definition of Basic Terms – House, Home, Household, Apartments, Multi storeyed Buildings, Special Buildings, Objectives and Strategies of National Housing Policies, Principle of Sustainable Housing, Housing Laws at State level, Bye-laws at Urban and Rural Local Bodies – levels - Development Control Regulations, Institutions for Housing at National, State and Local levels)			
UNIT – II	HOUSING PROGRAMMES	9 Periods	
Basic Concepts, Contents and Standards for Housing Programmes - Sites and Services, Neighborhoods, Open Development Plots, Apartments, Gated Community , Township , Rental Housing, Co-operative Housing, Slum Improvement , Slum Housing Programmes, Role of Public, Private and Non-Government Organisations.			
UNIT – III	PLANNING AND DESIGN OF HOUSING PROJECTS	9 Periods	
Formulation of Housing project - Base map preparation - survey techniques - Analytical methods - region classification - Demographic methods - population forecasting. Introduction of Remote sensing, GIS and GPS in urban planning context - Regional planning			
UNIT – IV	CONSTRUCTION TECHNIQUES AND COST-EFFECTIVE MATERIALS	9 Periods	
New Constructions Techniques – Cost Effective Modern Construction Materials, Building Centers – Concept, Functions and Performance Evaluation			
UNIT – V	HOUSING FINANCE AND PROJECT APPRAISAL	9 Periods	
Appraisal of Housing Projects – Housing Finance, Cost Recovery – Cash Flow Analysis, Subsidy and Cross Subsidy, Public Private partnership projects- Viability Gap Funding Pricing of Housing Units, Rents, Recovery Pattern.			
Contact Periods:			
Lecture: 45 Periods Tutorial: 0 Periods Practical: 0Periods Total:45 Periods			

TEXT BOOK

1	Meera Mehta and Dinesh Mehta, “ Metropolitan Housing Markets ”, Sage Publications Pvt. Ltd., New Delhi, 1999
2	Francis Cherunilam and Odeyar D Heggade, “ Housing in India ”, Himalaya Publishing House, Bombay, 1997.

REFERENCES

1	<i>Development Control Rules for Chennai Metropolitan Area, CMA, Chennai, 2002.</i>
2	<i>UNCHS, National Experiences with Shelter Delivery for the Poorest Groups, UNCHS (Habitat), Nairobi, 1994</i>
3	<i>National Housing Policy, 1994, Government of India.</i>
4	<i>Peter Hall, Mark Tewdwr-Jones, “Urban and Regional Planning” Taylor & Francis, (2010).</i>

COURSE OUTCOMES: On completion of the course, the students will be able to:		Bloom's Taxonomy Mapped
CO1	Know basic terms of housing, housing laws and control regulations.	K2
CO2	identify the role of public, private and non-government organizations.	K2
CO3	identify the different types of sites and improve their knowledge in design and evaluation.	K2
CO4	choose the effective materials for construction.	K2
CO5	Know the use of the finance assistance given by government.	K2

25WPC7E9	BRIDGE ENGINEERING	SEMESTER VII
----------	--------------------	--------------

PREREQUISITES	CATEGORY	L	T	P	C
25WPC401 THEORY OF STRUCTURES - I 25WPC403 BASIC STRUCTURAL DESIGN - II (CONCRETE)	PE	3	0	0	3

Course Objective	To familiarize with types and choice of bridges and understand the design concepts of bridge structures, culverts, bearing and sub structures.		
UNIT – I	INTRODUCTION	9 Periods	
Components of a bridge structure – inspection and site investigations for a bridge – Determination of linear waterway, design discharge and scour depth – Economical span – Types and choice of bridges. IRC loading classifications – simple problems.			
UNIT – II	SLAB BRIDGE AND T- BEAM BRIDGES	9 Periods	
Slab Bridge - Distribution of concentrated loads by IRC and Pigeaud’s Method – Design of T-beam bridge – design of main girder– Design of cross girders – Load distribution by Courbon’s Method – Skew slab Bridge.			
UNIT – III	BRIDGE AND BOX CULVERT	9 Periods	
Single span rigid frame bridge (barrel or slab type only) – box culvert (single vent only). Balanced cantilever RC bridges– Design of articulations.			
UNIT – IV	PRESTRESSED CONCRETE BRIDGES & STEEL BRIDGES	9 Periods	
Introduction to Design of PSC bridges – PSC girders – Introduction to design of steel bridges - Plate girder bridges – Box girder bridges – Truss bridges – Vertical and Horizontal stiffeners.			
UNIT – V	SUBSTRUCTURE, BEARING, MAINTENANCE AND INSPECTION OF BRIDGES	9 Periods	
Bearings – types, functions – simple problems – substructures – abutment, pier – materials-stability requirements -Rebuilding of bridges – replacement – pier tops – girders – side sleeving and end launching methods – Joints in bridges. Case studies.			
Contact Periods:			
Lecture: 45 Periods Tutorial: 00 Periods Practical: 00 Periods Total: 45 Periods			

TEXT BOOK :

1	Krishna Raju.N “ <i>Design of Bridges</i> ”, Oxford and IBH Publishing Co., New Delhi, 2015, 5th Edition.
2	Ponnuswamy.S, “ <i>Bridge Engineering</i> ”, 3rd edition, Tata McGraw Hill Publishing Co., Ltd, New Delhi, 2017.

REFERENCES:

2	Richard M. Barker & Jay A. Puckett, “ Design of Highway Bridges ”, John Wiley & Sons, Inc., 2007
3	Johnson Victor, D. “ Essentials of Bridge Engineering ”, Sixth Edition, Oxford and IBH Publishing Co. New Delhi, 2018.
4	Demetrius E. Tonias, F. ASCE, Jim J. Zhao, “ Bridge Engineering : Design, Rehabilitation, and Maintenance of Modern Highway Bridges ”, 3rd Edition, McGraw Hill, 2012.

COURSE OUTCOMES: On completion of the course, the students will be able to:		Bloom's Taxonomy Mapped
CO1	Apply IRC codal provisions in the design of bridges	K3
CO2	Analyze and design short span bridges	K3
CO3	Analyze and design long span bridges	K3
CO4	Explain the design of PSC bridges, box girder bridges, truss bridges	K3
CO5	Design the sub structures.	K3

25WPC7E10	ENVIRONMENTAL MANAGEMENT	SEMESTER VII
------------------	---------------------------------	---------------------

PREREQUISITES	CATEGORY	L	T	P	C
NIL	PE	3	0	0	3

Course Objectives	To understand the importance of nature and study about the water, air and soil pollution control as well as solid waste management.		
UNIT – I	NATURE AND SCOPE OF ENVIRONMENTAL PROBLEMS	9 Periods	
Environment and sustainable development – Natural and human environmental disturbances – Global warming –acid rain – ozone depletion – effects and control - climate change conventions – Kyoto protocol– India’s efforts for Environmental protection– Public policy and role of NGO’s			
UNIT – II	WATER POLLUTION AND CONTROL	9 Periods	
Fresh water and its pollution – Natural processes – sources and pollutants – pollution due to industrial, agricultural and municipal wastes – effects on streams - limitations of disposal by dilution – BOD consideration in streams – Oxygen Sag Curve – Strategies for sustainable water management Water management – Marine environment and its management– Water acts			
UNIT – III	AIR AND NOISE POLLUTION	9 Periods	
Pollutant emissions - sources and sink – effects of air pollution on human health, vegetation and climate– Global effects – prevention and control of air pollution – Control of particulates – Air pollution surveys and sampling – Air quality monitoring - Air Act – Management of air pollution –Sound level–Effect of noise on people–Environmental noise control-noise pollution rules			
UNIT – IV	SOLID WASTE MANAGEMENT AND SOIL POLLUTION	9 Periods	
Sources – Characteristics – Quantities – Collection methods – Processing and disposal techniques–Onsite Handling,storageandprocessing–sanitarylandfill–Incineration and pyrolysis –Composting–aerobic and anaerobic of compositing – Recycling and reuse of solid wastes – Hazardous wastes –Definition – Sources& types only – The Basel conventional use and degradation –strategies for sustainable and management– soil pollution – wetland conservation			
UNIT – V	ENVIRONMENTALMANAGEMENTSYSTEM	9 Periods	
Terminology – installation and common motives of EMS – Environmental standards – ISO 14000(Series) – basic principles – Environmental Audit – Environmental Impact assessment - Trade rules and environmental protection–Practices for Waste Minimization and Cleaner Production.			
Contact Periods: Lecture: 45 Periods Tutorial: 00 Periods Practical: 00 Periods Total: 45 Periods			

TEXT BOOKS:

1	Rao, " Air Pollution ", Tata McGraw-Hill Education, 1 July, 2017.
2	N.K.Uberoi, " Environmental Management ", Excel Books, New Delhi, 2011.

REFERENCES :

1	S.Vigneshwaran, M.Sundaravadivel and D.S.Chaudhary, " Environmental Management ", SCITECH Publications(India) Pvt.Ltd, Chennai & Hyderabad ,2010.
2	Technobanoglous, " Environmental management ", Mc Graw Hill Book Company,2006.
3	Howard S. Peavy, Donald R. Rowe and Gerogetchobanoglous, " Environmental Engineering ", McGraw - Hill Co., 2013.

COURSE OUTCOMES:

On completion of the course, the students will be able to:

		Bloom's Taxonomy Mapped
CO1	Identify the common issues related with environment.	K2
CO2	Analyse the sources, causes and effects of water pollution and their control.	K2
CO3	Infer the air pollution and noise pollution.	K2
CO4	Implement the various management techniques of solid waste and soil pollution.	K2
CO5	Compare the status of Environmental Management Systems.	K2
